

MICROSOFT WINDOWS 11 23H2

PACKAGING TUTORIAL: Different system versions have different packaging methods. The packaging process includes: "Language pack: add, associate, delete", "Drive: add, delete", "Cumulative update: add, delete", "InBox Apps: add, Update, mark" etc.

There are many hidden stories hidden behind this. If you want to unlock these, are you ready to start trying to encapsulate them?

Summary

Chapter 1	Encapsulation
Chapter 2	Common problem
Chapter 3	Known issues

II Running system

1. When using the DISM command to create a higher version image

When the operating system you are running is Windows 10 or lower than Windows 11 24H2, in some cases, using the DISM command to create a higher version image will cause some unknown problems. For example, when running the DISM command in the Windows 10 operating system to process the Windows Server 2025 offline image, you may receive an error message during the packaging process: "This application cannot run on your computer." Solution:

1.1. Upgrade the running operating system or reinstall to a higher version (recommended);

1.2. Upgrade or install a new version of ADK or PowerShell (not recommended)

1.2.1. You can try to upgrade to the latest PowerShell 7 or higher version;

1.2.2. After installing the latest version of ADK and replacing the DISM command, the problem of low DISM version can be solved. However, the command line mainly used by the packaging script is the PowerShell command line, so it is not recommended that you use the above method. The best method is to upgrade the running operating system or reinstall to a higher version.

2. Disk partition

2.1. After mounting an offline image to a REFS disk partition, some DISM commands may fail to execute properly. NTFS disk partitions are not affected by this.

2.2. After the ISO is decompressed, its location is not affected by the REFS partition.

3. Windows Security

- When processing the encapsulation task, a large number of temporary files will be generated, and a large number of installation files will be released when installing the application in InBox Apps;
- Turning on Windows Security scans files and takes up a lot of CPU.
- In test: 1 hour and 22 minutes before shutdown, 20 minutes after shutdown.

How to close:

With the command line in green, hold down the Windows key and press R to launch Run.

3.1. Open Windows Security or run: `windowsdefender:`

3.2. Select "Virus & Threat Protection" or Run: `windowsdefender://threat`

3.3. Find "Virus & Threat Protection Settings", click "Manage Settings" or Run: `windowsdefender://threatsettings`, we recommend that you turn off some features:

3.3.1. Real-time protection

3.3.2. Cloud=delivered protection

3.3.3. Automatic sample submission

3.3.4. Tamper Protection

3.4. When you're not encapsulated, we recommend that you turn on Windows Security.

4. ISO tools

Use a software that can edit ISO files, such as: [PowerISO](#), [DAEMON Tools](#), [ISO Workshop](#);

5. Command line

5.1. Optional "Terminal" or "PowerShell ISE", if "Terminal" is not installed, please go to: <https://github.com/microsoft/terminal/releases>
After downloading;

5.2. Open "Terminal" or "PowerShell ISE" as administrator, it is recommended to set the PowerShell execution policy: bypass, PS command line:

```
Set-ExecutionPolicy -ExecutionPolicy Bypass -Force
```

5.3. In this article, PS command line, green part, please copy it, paste it into the "Terminal" dialog box, press Enter and start running;

5.4. When there is [.ps1](#), right-click the file and select Run with PowerShell, or copy the path and paste it into Terminal to run, the path with a colon, add the & character in the command line, example: [& "D:\YiSolutions\Encapsulation\SIP.ps1"](#)

II Requirements

1. System installation package

Keywords: [iteration](#), [cross-version](#), [major version](#), [cumulative update](#), [initial release](#)

1.1. illustrate

1.1.1. Please remake the image when each version is updated, for example, when crossing from 21H1 to 22H2, avoid other compatibility problems, and do not make the image based on the old image;

1.1.2. The regulation has been clearly communicated to packagers in various forms by some OEMs, and direct upgrades from iterative versions are not allowed;

1.1.3. Please use "Initial Version" and "Developer Edition" for production. There was a brief appearance in the official Microsoft documentation that the initial version must be used in production, but this sentence was later deleted in the official documentation;

1.1.4. After installing the language pack, you must re-add the cumulative update (the same version number), and if you do not add the cumulative update, problems such as "garbled characters" and "interface flashback" will occur.

1.1.5. Evolutionary process: Windows 11 23H2, Build 22631.2428 + (KB5027397 + kb5035853) = OS Build 22631.3296

1.2. Prepare to download the initial or developer version

1.2.1. x64

1.2.1.1. Filename: [en-us_windows_11_business_editions_version_23h2_x64_dvd_a9092734.iso](#)

List of files: <https://files.rg-adguard.net/file/4844bd9b-9676-c00e-76d5-31f9be8d968e>

1.2.1.2. Filename: [en-us_windows_11_consumer_editions_version_23h2_x64_dvd_8ea907fb.iso](#)

List of files: <https://files.rg-adguard.net/file/fa33f04b-e9f3-0b7a-99e5-cd76085cb069>

1.2.1.3. Filename: [en-us_windows_11_iot_enterprise_version_23h2_x64_dvd_fb37549c.iso](#)

List of files: <https://files.rg-adguard.net/file/97a5761d-6736-b102-af2b-488197780556>

1.2.2. arm64

1.2.2.1. Filename: [en-us_windows_11_iot_enterprise_version_23h2_arm64_dvd_6cc52d75.iso](#)

List of files: <https://files.rg-adguard.net/file/f2f8c73e-3e4a-de14-e71e-ddae3bc0ef99>

1.3. After the sample download [en-us_windows_11_business_editions_version_23h2_x64_dvd_a9092734.iso](#), Unzip to: [D:\en-us_windows_11_business_editions_version_23h2_x64_dvd_a9092734](#)

Note: Before decompressing to disk D, you should check whether it is a ReFS partition. If it is a ReFS partition, some DISM commands will fail. Solution: Please use a disk partition in NTFS format.

1.4. After decompression is complete, change the directory [D:\en-us_windows_11_business_editions_version_23h2_x64_dvd_a9092734](#) change to [D:\OS_11](#)

1.5. All scripts and all paths are set to [D:\OS_11](#) as the image source.

1.6. Installation configuration

1.6.1. Learn: [Windows Setup Edition Configuration and Product ID Files \(Ei.cfg and PID.txt \)](#)

1.6.2. Known issues

1.6.2.1. When there is no [Ei.cfg](#), ISO boot installation will report an error when selecting certain versions, prompting:
Windows cannot find the Microsoft Software License terms. Make sure the installation sources are valid and restart the installation.

1.6.2.2. How to solve it? Add [ei.cfg](#) to [D:\OS_11\Sources](#) and create [ei.cfg](#):

```
@"  
  
[Channel]  
  
volume  
  
[VL]  
  
1  
  
"@ | Out-File -FilePath "D:\OS_11\sources\EI.CFG" -Encoding Ascii
```

1.7. Report

Check the installed image package: language packs, associated language pack components, pre-installed InBox Apps applications and other detailed information. After downloading the report, use Excel software to open the .xlsx.

1.7.1. Report: Overview

Contains: ISO system installation package, image version, region, region association, associated language pack components, etc.

[Report.Overview.xlsx](#)

○ [Expand\Install\Report\Report.Overview.xlsx](#)

- https://raw.githubusercontent.com/ilikeyi/solutions/main/_Learn/Packaging/tutorial/OS.11/23H2/Expand/Install/Report/Report.Overview.xlsx

1.7.2. Report: Complete

Inclusion: ISO system installation package, image version, region, region association, associated language pack components, installed InBox Apps pre-installed applications, etc.

[en-us](#), [ar-sa](#), [bg-bg](#), [cs-cz](#), [da-dk](#), [de-de](#), [el-gr](#), [en-gb](#), [es-es](#), [es-mx](#), [et-ee](#), [fi-fi](#), [fr-ca](#), [fr-fr](#), [he-il](#), [hr-hr](#), [hu-hu](#), [it-it](#), [ja-jp](#), [ko-kr](#), [lt-lt](#), [lv-lv](#), [nb-no](#), [nl-nl](#), [pl-pl](#), [pt-br](#), [pt-pt](#), [ro-ro](#), [ru-ru](#), [sk-sk](#), [sl-si](#), [sr-latn-rs](#), [sv-se](#), [th-th](#), [tr-tr](#), [uk-ua](#), [zh-cn](#), [zh-tw](#)

2. Language pack

2.1. Learn

As you read, please understand the important highlights of "Blue".

2.1.1. [Languages overview](#)

2.1.2. [Add languages to a Windows 11 image](#)

2.1.3. [Language and region Features on Demand \(FOD\)](#)

2.1.3.1. Fonts

- When adding a language pack, when the corresponding region is triggered, the required font functions need to be added, download "[List of all available language FODs](#)" learn more.
- In "Language Pack: Extract", the automatic recognition function has been added, and you can understand the functions: [Function Match_Required_Fonts](#)

2.1.3.2. Regional association

What are regional connections?

- When the image language is only in English, after adding the [zh-HK](#) language pack, the image language will not be added. You should install [zh-TW](#) first, and then install [zh-HK](#) to obtain the corresponding association.

Known regional associations:

2.1.3.2.1. Region: [ar-sa](#), Optional associated areas: [en-US](#), associated installation package:

2.1.3.2.1.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-
Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.1.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-
Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.2. Region: [bg-bg](#), Optional associated areas: [en-US](#), associated installation package:

2.1.3.2.2.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-
Package~31bf3856ad364e35~amd64~~.cab

- 2.1.3.2.8. Region: [th-th](#), Optional associated areas: [en-US](#), associated installation package:
- 2.1.3.2.8.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.8.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab
- 2.1.3.2.9. Region: [uk-ua](#), Optional associated areas: [en-US](#), associated installation package:

- 2.1.3.2.9.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-
Package~31bf3856ad364e35~amd64~~.cab
- 2.1.3.2.9.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-
Package~31bf3856ad364e35~amd64~~.cab
- 2.1.3.2.10. Region: **zh-TW**, Optional associated areas: **zh-HK**, associated installation package:
 - 2.1.3.2.10.1. Microsoft-Windows-LanguageFeatures-Basic-zh-hk-
Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.10.2. Microsoft-Windows-LanguageFeatures-Speech-zh-hk-
Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.10.3. Microsoft-Windows-LanguageFeatures-TextToSpeech-zh-hk-
Package~31bf3856ad364e35~amd64~~.cab
- 2.1.3.3. Other region-specific requirements

When triggering a known area, a specific "package" needs to be added.

 - 2.1.3.3.1. Region: **zh-TW**

Package: **Microsoft-Windows-InternationalFeatures-Taiwan-
Package~31bf3856ad364e35~amd64~~.cab**

Description: **Supplemental support for Taiwan date formatting requirements. Package will be provided to customers located in Taiwan.**

Recommendation: **Preinstall only on devices shipping to the Taiwan market. Not installing this capability on devices causes any API calls to that use the Taiwan calendar to fail.**

THERE IS CONTROVERSY:

- During the test, it was found that this package was not installed in the original image of Microsoft's official original Windows 11. However, there are known issues in the recommended items. In the end, it is consistent with the official Microsoft original version, and the packager can freely choose to install it. or not.

2.2. Language pack: Download

2.2.1. x64

- 2.2.2. Filename: https://software-static.download.prss.microsoft.com/dbazure/988969d5-f34g-4e03-ac9d-1f9786c66749/22621.1.220506-1250.ni_release_amd64fre_CLIENT_LOF_PACKAGES_OEM.iso

List of files: <https://files.rg-adguard.net/file/4f7bf45f-9970-e758-44cf-876643f49709>

2.3. Language pack: Fixed

2.3.1. Select any website and open:

- 2.3.1.1. <https://uupdump.net>

- 2.3.1.2. <https://uup.ee>

2.3.1.3. <https://osdump.com>

2.3.2. After opening, search for keywords: [22631.2428](#), select from the search results: [Windows 11, version 23H2 \(22631.2428\)](#)
[amd64](#)

2.3.3. After opening, select "[All files](#)";

2.3.4. Search the green part in the "[All Files](#)" page and download

2.3.4.1. Applies to: Install.wim:

2.3.4.1.1. [MediaPlayer](#)

2.3.4.2. Applies to: WinRE.wim, none yet

2.3.4.3. Applies to: Boot.wim, none yet

2.3.5. After downloading all the files, scroll to the bottom of the page, download and run "[Generate Rename Script \(Windows\)](#)"

2.3.6. Use ISO editing software, edit [22621.1.220506-1250.ni_release_amd64fre_CLIENT_LOF_PACKAGES_OEM.iso](#), and add the downloaded file to the [\[ISO\]:\LanguagesAndOptionalFeatures](#) directory;

3. InBox Apps

3.1. Download: https://software-static.download.prss.microsoft.com/dbazure/888969d5-f34g-4e03-ac9d-1f9786c66749/22621.2501.231009-1937.ni_release_svc_prod3_amd64fre_InboxApps.iso

List of files: <https://files.rg-adguard.net/file/5e7beb23-960d-d328-24f3-ef6378cd139d>

3.2. Download: https://software-static.download.prss.microsoft.com/dbazure/988969d5-f34g-4e03-ac9d-1f9786c66749/22621.1.220506-1250.ni_release_amd64fre_InboxApps.iso

List of files: <https://files.rg-adguard.net/file/263fed3d-be1f-9307-0c30-259d1027b2bd>

Download finally, Extract:

3.2.2.2. [Microsoft.WindowsTerminal_8wekyb3d8bbwe.xml](#)

Warning

- The installation version number of the [Microsoft.WindowsTerminal_8wekyb3d8bbwe.msixbundle](#) provided in the [22621.1778.230511-2102.ni_release_svc_prod3_amd64fre_InboxApps.iso](#) file is: [1.17.12191](#), and it will not run normally after installing this version number.
- The version number provided in the initial release of Windows 11 23H2 22631.2428 is: [1.12.10983](#), and it will work properly when installed.

3.3. Use the ISO editing tool to edit [22621.1778.230511-2102.ni_release_svc_prod3_amd64fre_InboxApps.iso](#) and add the extracted files to the [\[ISO\]:\packages](#) directory;

B. Language Pack: Extract

II Language pack: Ready

Mount [22621.1.220506-1250.ni_release_amd64fre_CLIENT_LOF_PACKAGES_OEM.iso](#) or unzipped to any location;

III Language pack: Scheme

1. Add

1.1. Language name: [Simplified Chinese - China](#), Region: [zh-CN](#), Scope of application: [Install.Wim](#), [Boot.Wim](#), [WinRE.Wim](#)

2. Delete

2.1. Language name: [English - United States](#), Region: [en-US](#), Scope of application: [Install.Wim](#), [Boot.Wim](#), [WinRE.Wim](#)

IV Execute the extract command

- [Auto](#) = automatically search all local disks, default;
- Customize the path, for example, specify the E drive: [\\$ISO = "E:\"](#)
- [Extract.ps1](#)
 - [\Expand\Extract.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/23H2/Expand/Extract.ps1

- Copy the code

```
$ISO = "Auto"

$SaveTo = "D:\OS_11_Custom"

$Extract_language_Pack = @(

    @{ Tag = "zh-CN"; Act = "Add"; Scope = @( "Install\Install"; "Install\WinRE"; "Boot\Boot" ) }

    @{ Tag = "en-US"; Act = "Del"; Scope = @( "Install\Install"; "Install\WinRE"; "Boot\Boot" ) }

)

C. Custom encapsulation

II Custom encapsulation Install.wim

1. View Install.wim details

Image name, image description, image size, architecture, version, index number, etc.

```
$ViewFile = "D:\OS_11\Sources\Install.wim"
```

```
Get-WindowsImage -ImagePath $ViewFile | Foreach-Object { Get-WindowsImage -ImagePath $ViewFile -index $_.ImageIndex }
```

LOOP OPERATING AREA, START,

2. Specify the path to mount Install.wim

```
New-Item -Path "D:\OS_11_Custom\Install\Install\Mount" -ItemType directory
```

3. Start mounting Install.wim

Default index number: 1

```
Mount-WindowsImage -ImagePath "D:\OS_11\sources\install.wim" -Index "1" -Path "D:\OS_11_Custom\Install\Install\Mount"
```

PROCESS FILES WITHIN THE INSTALL.WIM IMAGE, OPTIONALLY, START,

3.1. Custom encapsulation WinRE.wim

WARNING:

- WinRE.wim is a file within the Install.wim image;
- When Install.wim has multiple index numbers, only process any WinRE.wim;

- Synchronize to all index numbers to reduce the size of Install.wim, learn "[How to batch replace WinRE.wim in all index numbers in Install.wim](#)".

3.1.1. View WinRE.wim details

Image name, image description, image size, architecture, version, index number, etc.

```
$ViewFile = "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery\WinRE.wim"
```

```
Get-WindowsImage -ImagePath $ViewFile | Foreach-Object { Get-WindowsImage -ImagePath $ViewFile -index
$_.ImageIndex }
```

3.1.2. Specify the path to mount WinRE.wim

```
New-Item -Path "D:\OS_11_Custom\Install\WinRE\Mount" -ItemType directory
```

3.1.3. Start mounting WinRE.wim

Default index number: 1

```
Mount-WindowsImage -ImagePath "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery\WinRE.wim" -
Index "1" -Path "D:\OS_11_Custom\Install\WinRE\Mount"
```

3.1.4. Language pack: WinRE

- Automatically install language packs: Get "Component: All installed packages in the image" and match them. After matching the corresponding names, install the local corresponding language pack files.
- When adding languages, different schema versions must be corresponded, and if not, errors are reported during the addition process.

3.1.4.1. Language pack: add

- WinRE.Instl.lang.ps1
 - [\Expand\Install\WinRE\WinRE.Instl.lang.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/23H2/Expand/Install/WinRE/WinRE.Instl.lang.ps1

- Copy the code

```
$Mount = "D:\OS_11_Custom\Install\WinRE\Mount"
```

```
$Sources = "D:\OS_11_Custom\Install\WinRE\Language\Add\zh-CN"
```

```

3.1.5.3. Solid update

It cannot be uninstalled after curing, which cleans the recovery image and resets the basis of any superseded components.

```
Dism /image:"D:\OS_11_Custom\Install\WinRE\Mount" /cleanup-image /StartComponentCleanup  
/ResetBase
```

3.1.5.3.1. Clean components after curing and updating

```
$Mount = "D:\OS_11_Custom\Install\WinRE\Mount"  
  
Get-WindowsPackage -Path $Mount -ErrorAction SilentlyContinue | ForEach-Object {  
  
    if ($_.PackageState -eq "Superseded") {  
  
        Write-Host "  ${_.PackageName}" -ForegroundColor Green  
  
        Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null  
  
    }  
  
}
```

3.1.6. Drive

3.1.7. Save image: WinRE.wim

```
Save-WindowsImage -Path "D:\OS_11_Custom\Install\WinRE\Mount"
```

3.1.8. Unmount image: WinRE.wim

Close any applications that may be accessing files in the image, including File Explorer.

```
Dismount-WindowsImage -Path "D:\OS_11_Custom\Install\WinRE\Mount" -Discard
```

3.1.9. After rebuilding WinRE.wim, the file size can be reduced

- WinRE.Rebuild.ps1
 - [\Expand\Install\WinRE\WinRE.Rebuild.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/WinRE/WinRE.Rebuild.ps1

- Copy the code

```
$FileName = "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery\WinRE.wim"  
  
Get-WindowsImage -ImagePath $Filename -ErrorAction SilentlyContinue | ForEach-Object {  
  
    Write-Host "  Image name: " -NoNewline; Write-Host "${_.ImageName}" -ForegroundColor Yellow  
  
    Write-Host "  The index number: " -NoNewline; Write-Host "${_.ImageIndex}" -ForegroundColor Yellow  
  
    Write-Host "`n  Under reconstruction ".PadRight(28) -NoNewline  
  
    try{  
  
        Export-WindowsImage -SourceImagePath "${($Filename)}" -SourceIndex "${(_.ImageIndex)}" -  
DestinationImagePath "${($FileName).New}" -CompressionType max | Out-Null  
  
    }  
  
}
```

```

        Write-Host "Finish" -ForegroundColor Green

    } catch {

        Write-Host $_ -ForegroundColor Yellow

        Write-host $Failed -ForegroundColor Red

    }

}

Write-Host "`n  Rename: " -NoNewline -ForegroundColor Yellow

if (Test-Path "$($FileName).New" -PathType Leaf) {

    Remove-Item -Path $Filename

    Move-Item -Path "$($FileName).New" -Destination $Filename

    Write-Host "Finish" -ForegroundColor Green

} else {

    Write-host "Failed" -ForegroundColor Red

}

```

3.1.10. Backup WinRE.wim

- WinRE.Backup.ps1
 - [\Expand\Install\WinRE\WinRE.Backup.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/WinRE/WinRE.Backup.ps1

- Copy the code

```

$WimLibPath = "D:\OS_11_Custom\Install\Install\Update\Winlib"

$FileName = "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery\WinRE.wim"

New-Item -Path $WimLibPath -ItemType Directory

Copy-Item -Path $FileName -Destination $WimLibPath -Force

```

3.1.11. Replace WinRE.wim within the Install.wim image

- After each mount Install.wim "[Replace WinRE.wim](#)";
- Learn "[Get all index numbers of Install.wim and replace the old WinRE.wim](#)".

[Process the files in the Install.wim image and end.](#)

4. Language pack

- Automatically install language packs: Get "Component: All installed packages in the image" and match them. After matching the corresponding names, install the local corresponding language pack files.

- When adding languages, different schema versions must be corresponded, and if not, errors are reported during the addition process.

4.1. Language pack: add

- Install.Instl.lang.ps1
 - [\Expand\Install\Install.Instl.lang.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.Instl.lang.ps1

- Copy the code

```
Function Language_Install

{

    param($Mount, $Sources, $Lang)

    $Initl_install_Language_Component = @()

    if (Test-Path $Mount -PathType Container) {

        Get-WindowsPackage -Path $Mount | ForEach-Object { $Initl_install_Language_Component += $_.PackageName }

    } else {

Language_Install -Mount "D:\OS_11_Custom\Install\Install\Mount" -Sources
"D:\OS_11_Custom\Install\Install\Language\Add" -Lang "zh-CN"

```

4.2. Offline image language: change

- Starting Windows 11, the [default System UI Language](#) set by DISM is left unaltered on all editions except for Home edition. For [all commercial editions](#) the language chosen during the Out-of-Box Experience (OOBE) is set as the [System Preferred UI language](#) and Windows will be displayed in this language and for Home edition the language chosen at OOBE will continue to be the default System UI Language.
- As of Windows 10, version 2004, if an .appx-based Language Experience Pack (LXP) backed language is passed as an argument then the language will be set as the System Preferred UI language and its parent language will be set as the Default System UI language. In prior versions only .cab based language packs were supported.

4.2.1. Change default language, regional settings, and other international settings

Region: zh-CN

Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /Set-AllIntl:zh-CN

4.2.2. View available language settings

Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /Get-Intl

4.3. Components: All packages installed in the image

4.3.1. View

Get-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" | Out-GridView

4.3.2. Export to csv

\$SaveTo = "D:\OS_11_Custom\Install\Install\Report.Components.\$(Get-Date -Format "yyyyMMddHHmmss").csv"

Get-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" | Export-CSV -NoType -Path \$SaveTo

Write-host \$SaveTo -ForegroundColor Green

5. InBox Apps

5.1. Learn

5.1.1. [DISM App Package \(.appx or .appxbundle\) Servicing Command-Line Options](#)

Important:

DISM /add-provisionedappxpackage Starting in Windows 10 version 1803, when using this option, you can preinstall apps without pinning them to the Start menu /region. When preinstalling an app, you can choose to exclude the app from LayoutModification.xml so that the app will install successfully and not appear as a Start menu tile. If no region list is specified, the app will only be provisioned when it is pinned to the Start layout.

Again, you are warned that using the command line to add must add the parameter: /Region

5.2. InBox Apps: Pre-install the application

```

5.5. Installing "Local Language Experience Packs (LXPs)" to offline images marks: installed languages

Before you learn about installed language tags, first understand the list of languages available in the ZuneMusic app: [en-us](#), en-gb, as-in, az-latn-az, bs-latn-ba, bn-in, cs-cz, cy-gb, ar-sa, de-de, af-za, am-et, da-dk, el-gr, es-es, es-mx, ca-es, ca-es-valencia, eu-es, fi-fi, bg-bg, ga-ie, et-ee, gl-es, gu-in, gd-gb, fil-ph, fr-ca, fr-fr, hy-am, fa-ir, hu-hu, id-id, it-it, ja-jp, hr-hr, ka-ge, is-is, he-il, hi-in, kk-kz, lo-la, km-kh, lt-lt, kn-in, kok-in, ko-kr, mk-mk, lv-lv, ms-my, mi-nz, mr-in, mt-mt, ne-np, nl-nl, nb-no, ml-in, nn-no, lb-lu, or-in, ro-ro, sk-sk, ru-ru, pl-pl, quz-pe, pt-br, pt-pt, sq-al, ta-in, th-th, sv-se, pa-in, sr-cyrl-ba, sr-cyrl-rs, sr-latn-rs, ur-pk, ug-cn, tr-tr, uk-ua, tt-ru, [zh-cn](#), vi-vn, uz-latn-uz, sl-si, zh-tw, te-in

View installed languages for offline images

```
Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /Get-Intl
```

View results Installed languages: [en-US](#), [zh-CN](#). When installing the ZuneMusic app, the installer will match "Installed Languages" and automatically filter the list of uninstalled languages. This is the language tag.

5.6. Offline image has language tag installed: How to add it

To mark the offline image: Language has been installed, there are two methods. The first is to install [Microsoft-Windows-Client-Language-Pack_x64-zh-cn.cab](#), and the second is to install "Local Language Experience Pack (LXPs)". Microsoft official Windows 10 provides Local Language Experience Pack (LXPS) installation files, but Windows 11 no longer provides them. If you want to get them:

5.6.1. Download using the Windows Local Language Experience Packs (LXPs) Downloader

learn: <https://github.com/ilikeyi/LXPs>

After downloading, save to: [D:\OS_11_Custom\Install\Install\InBox.Apps](#)

File format: [LanguageExperiencePack.zh-CN.Neutral.Appx](#)

5.6.2. Manual download

5.6.2.1. Region

yo-ng	9NGM3VPPZS5V	zh-cn	9NRMNT6GMZ7
zh-tw	9PCJ4DHCQ1JQ	zu-za	9NNRM7KT5NB0

Download Region: zh-CN, application ID: 9NRMNT6GMZ70, Store link:
<https://www.microsoft.com/store/productId/9NRMNT6GMZ70>

5.6.2.2. Open the website: <https://store.rg-adguard.net>

5.6.2.2.1. Search keywords: <https://www.microsoft.com/store/productId/9NRMNT6GMZ70>

5.6.2.2.2. Search 22621 content in the web page, search results:
[Microsoft.LanguageExperiencePackzh-CN_22621.*.neutral__8wekyb3d8bbwe.appx](#)

5.6.2.2.3. After downloading, save it to the
[D:\OS_11_Custom\Install\Install\InBox.Apps](#) directory and rename it:
[LanguageExperiencePack.zh-cn.Neutral.Appx](#)

5.6.3. Execute the installation command to install the local language experience package (LXPs)

After understanding how to add zone tags, obtain [LanguageExperiencePack.zh-cn.Neutral.appx](#), execute the installation command:

```
Add-AppxProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\InBox.apps\LanguageExperiencePack.zh-cn.Neutral.appx" -SkipLicense
```

5.6.4. Regional tag: New changes

The installed language of the offline image will become the default. For example, if the installed languages are en-US and zh-CN, when you reinstall or update the InBox Apps application, the installed language will be referenced for matching and the corresponding language pack will be automatically added. You can view the changes in the following ways.

5.6.4.1. InBox Apps: An installed application package

```
$custom_array = @(); Get-AppXProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" |  
ForEach-Object { $custom_array += [PSCustomObject]@{ DisplayName = $_.DisplayName;  
PackageName = $_.PackageName; Version = $_.Version; Architecture = $_.Architecture; ResourceId =  
$_.ResourceId; Regions = $_.Regions; } };
```

- After executing the above PS code first, you can select the following "View" or "Export to CSV".

5.6.4.1.1. View

```
$custom_array | Out-GridView
```

5.6.4.1.2. Export to Csv

```
$SaveTo = "D:\OS_11_Custom\Install\Install\Report.InBox.Apps.${Get-Date -Format  
"yyyyMMddHHmmss"}.csv"
```

```
$custom_array | Export-CSV -NoType -Path $SaveTo
```

```
Write-host $SaveTo -ForegroundColor Green
```

5.6.4.2. View available language settings

```
Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /Get-Intl
```

5.7. InBox Apps: Install

5.7.1. Mount or decompress the InBox Apps installation file

Mount [22621.1.220506-1250.ni_release_amd64fre_InboxApps.iso](#) or extract to any location;

5.7.2. After executing the installation command, install InBox Apps to: Install.wim

- [Auto](#) = Automatically search all local disks, default;
- Custom path, e.g. specify F drive: [\\$ISO = "F:\packages"](#)
- Architecture: [x64](#)

- Install.Inst.InBox.Apps.ps1
 - `\Expand\Install\Install.Inst.InBox.Apps.ps1`
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.Inst.InBox.Apps.ps1

- Copy the code

```
$ISO = "Auto"

$Mount = "D:\OS_11_Custom\Install\Install\Mount"

$Arch = "x64"

try {

    Write-host "`n Offline image version: " -NoNewline

    $Current_Edition_Version = (Get-WindowsEdition -Path $Mount).Edition

    Write-Host $Current_Edition_Version -ForegroundColor Green

} catch {

    Write-Host "Error" -ForegroundColor Red

    Write-Host " $($_) " -ForegroundColor Yellow

    return

}

5.8. Offline image has language tag installed: Remove

- After completing the installation of the InBox Apps application, the Region tag is no longer important and can be deleted or not deleted. Delete "Local Language Experience Package (LXPs), Simplified Chinese - China" and uniquely identify the Region tag: **zh-CN**, can be changed to other Region tag.

- Install.Clear.Flag.ps1

- [\Expand\Install\Install.Clear.Flag.ps1](#)

- https://github.com/likeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.Clear.Flag.ps1

- Copy the code

```

$Lang = "zh-CN"

Get-AppXProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" | Foreach-object {

    if ($_.DisplayName -Like "*LanguageExperiencePack*${$Lang}*") {

        Write-host " ${_.DisplayName}"; Write-Host " Deleting ".PadRight(22) -NoNewline

        try {

            Remove-AppxProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackageName $_.PackageName -
            ErrorAction SilentlyContinue | Out-Null

            Write-host "Finish" -ForegroundColor Green

        } catch {

            Write-host "Failed" -ForegroundColor Red

        }

    }

}

```

5.9. InBox Apps: optimization

After the app is installed, provisioning the Appx package should be optimized to reduce the app's disk usage by replacing identical files with hard links, only for offline images.

```
Optimize-AppXProvisionedPackages -Path "D:\OS_11_Custom\Install\Install\Mount"
```

6. Cumulative updates

- When upgrading different versions or old versions to the latest version, you need to add the "Function Enablement Package" first before adding the latest cumulative update;

- After adding a language pack, you can install the same cumulative update as the initial version to resolve a known issue where the "Components: All packages installed in the image" status is not refreshed after installation;
- To stay up to date, it is recommended that you download the latest version.

6.1. Exclusive feature enablement package

- Learn: [KB5027397: Feature update to Windows 11, version 23H2 by using an enablement package](#)
- When making Windows 11 versions 22H2 and 23H2, you need to install the "Feature Enablement Package" in advance before you can install the cumulative update of 22631.*. After downloading, save it to: [D:\OS_11_Custom\Install\Install\Update](#). Select the download according to the architecture:

6.1.1. x64, default

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/caa3ff4a-6420-4341-aeae-33b2d7f463be/public/windows11.0-kb5027397-x64_3a9c368e239bb928c32a790cf1663338d2cad472.msu

- Add to

```
$KBPath = "D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5027397-x64_3a9c368e239bb928c32a790cf1663338d2cad472.msu"
```

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath $KBPath
```

6.1.2. Arm64

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/c29dd4ea-7f6a-4636-a991-29ba8ae70658/public/windows11.0-kb5027397-arm64_bacb74fba9077a5b7ae2f74a3ebb0b506f9708f3.msu

- Add to

```
$KBPath = "D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5027397-arm64_bacb74fba9077a5b7ae2f74a3ebb0b506f9708f3.msu"
```

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath $KBPath
```

6.2. Initial version

- Microsoft has officially provided an exclusive feature activation package for the initial version of Windows 11 23H2 22631.2428. File name: [X23-59425_Windows11-23H2-FeatureEnablement.zip](#). The compressed package contains the following files: [KB5031354](#), [KB5027397](#).
- First add the "Exclusive Function Enablement Package" and then add the "Initial Version", go to the download page: <https://www.catalog.update.microsoft.com/Search.aspx?q=KB5031354>, and save it to: [D:\OS_11_Custom\Install\Install\Update](#), or download through direct connection, select download according to the architecture:

6.2.1. x64, default

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/885dcacb-fb29-4536-88f6-4fd4792a4a65/public/windows11.0-kb5031354-x64_3391407e62562e0e48a437c5c7115667305d788c.msu

- Add to

```
$KBPath = "D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5031354-x64_3391407e62562e0e48a437c5c7115667305d788c.msu"
```

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath $KBPath
```

6.2.2. Arm64

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/e3e1d074-cfde-4c2d-ba0c-f6887db3b166/public/windows11.0-kb5031354-arm64_3848ce9f925f15d07ad1dd06fe976e6719634653.msu

- Add to

```
$KBPath = "D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5031354-arm64_3848ce9f925f15d07ad1dd06fe976e6719634653.msu"
```

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath $KBPath
```

6.3. Other versions

- Before installation, download the exclusive function activation package [KB5027397](#) and add it first, and then add other versions in sequence.
- Check "[Windows 11 version information](#)", for example, download cumulative update: [KB5035853](#), Version: [22631.3296](#), go to the download page: <https://www.catalog.update.microsoft.com/Search.aspx?q=KB5035853>, download and save to: [D:\OS_11_Custom\Install\Install\Update](#), or download through direct connection, select download according to the architecture:

6.3.1. x64, default

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/594b22d5-84c3-4665-bdc7-3167c91759b9/public/windows11.0-kb5035853-x64_8ca1a9a646dbe25c071a8057f249633a61929efa.msu

- Add to

```
$KBPath = "D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5035853-x64_8ca1a9a646dbe25c071a8057f249633a61929efa.msu"
```

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath $KBPath
```

6.3.2. Arm64

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/72ba502a-7982-471c-aad2-355efddbff61/public/windows11.0-kb5035853-arm64_076c009bca80cfa85272bd50d65951c2f663fcc5.msu

- Add to

```
$KBPath = "D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5035853-arm64_076c009bca80cfa85272bd50d65951c2f663fcc5.msu"
```

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath $KBPath
```

6.4. Solidify Updated

It cannot be uninstalled after curing, which cleans the recovery image and resets the basis of any superseded components.

```
Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /cleanup-image /StartComponentCleanup /ResetBase
```

6.4.1. Clean components after curing and updating

```
$Mount = "D:\OS_11_Custom\Install\Install\Mount"

Get-WindowsPackage -Path $Mount -ErrorAction SilentlyContinue | ForEach-Object {

    if ($_.PackageState -eq "Superseded") {

        Write-Host " $_.PackageName" -ForegroundColor Green

        Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null

    }

}
```

7. Drive

8. Deployment engine: Add

- Learn "[Deployment Engine](#)", if added to ISO installation media, can skip adding to mounted.
- After adding the deployment engine, continue at the current location.

9. Health

Before saving, check whether it is damaged. If the health status is abnormal, stop saving.

```
Repair-WindowsImage -Path "D:\OS_11_Custom\Install\Install\Mount" -ScanHealth
```

10. Replace WinRE.wim

WinRE.wim in all index numbers in Install.wim has been replaced in batches. Please skip this step.

```
$WinRE = "D:\OS_11_Custom\Install\Install\Update\Winlib\WinRE.wim"
```

```
$CopyTo = "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery"
```

```
Copy-Item -Path $WinRE -Destination $CopyTo -Force
```

11. Save image: Install.wim

```
Save-WindowsImage -Path "D:\OS_11_Custom\Install\Install\Mount"
```

12. Unmount image: Install.wim

Close any applications that may be accessing files in the image, including File Explorer.

```
Dismount-WindowsImage -Path "D:\OS_11_Custom\Install\Install\Mount" -Discard
```

LOOP OPERATING AREA, END.

13. How to batch replace WinRE.wim in all index numbers in Install.wim

13.1. Obtain WimLib

After going to the official website of <https://wimlib.net>, select a different version: [arm64](#), [x64](#), [x86](#), and extract it to: [D:Wimlib](#) after downloading

13.2. How to extract and update WinRE.wim in Install.wim

13.2.1. Extract the WinRE.wim file Install.wim from Install.wim

- Install.WinRE.Extract.ps1
 - [\Expand\Install\Install.WinRE.Extract.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.WinRE.Extract.ps1

- Copy the code

```
$Arguments = @(
    "extract",
    "D:\OS_11\sources\install.wim", "1",
    "\"Windows\System32\Recovery\Winre.wim",
    "--dest-dir=\""D:\OS_11_Custom\Install\Install\Update\Winlib""
)

New-Item -Path "D:\OS_11_Custom\Install\Install\Update\Winlib" -ItemType Directory

Start-Process -FilePath "d:\wimlib\wimlib-imagex.exe" -ArgumentList $Arguments -wait -nonewwindow
```

13.2.2. Get all index numbers of Install.wim and replace the old WinRE.wim

- Install.WinRE.Replace.wim.ps1
 - [\Expand\Install\Install.WinRE.Replace.wim.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.WinRE.Replace.wim.ps1

- Copy the code

```
Get-WindowsImage -ImagePath "D:\OS_11\sources\install.wim" -ErrorAction SilentlyContinue | ForEach-Object {
    Write-Host " Image name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow

    Write-Host " The index number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow
}
```

```

Write-Host "`n Replacement "

$Arguments = @(

    "update",

    "D:\OS_11\sources\install.wim", $_.ImageIndex,

    "--command=""add 'D:\OS_11_Custom\Install\Install\Update\Winlib\WinRE.wim'
'\Windows\System32\Recovery\WinRe.wim'""""

)

Start-Process -FilePath "d:\wimlib\wimlib-imagex.exe" -ArgumentList $Arguments -wait -nonewwindow

Write-Host " Finish`n" -ForegroundColor Green

}

```

14. Rebuilding Install.wim reduces file size

- Install.Rebuild.wim.ps1
 - [\Expand\Install\Install.Rebuild.wim.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.Rebuild.wim.ps1

- Copy the code

```

$InstallWim = "D:\OS_11\sources\install.wim"

Get-WindowsImage -ImagePath $InstallWim -ErrorAction SilentlyContinue | ForEach-Object {

    Write-Host " Image name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow

    Write-Host " The index number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow

    Write-Host "`n Under reconstruction".PadRight(28) -NoNewline

    Export-WindowsImage -SourceImagePath $InstallWim -SourceIndex $_.ImageIndex -DestinationImagePath "$($InstallWim).New" -
    CompressionType max | Out-Null

    Write-Host "Finish`n" -ForegroundColor Green

}

if (Test-Path "$($InstallWim).New" -PathType Leaf) {

    Remove-Item -Path $InstallWim

    Move-Item -Path "$($InstallWim).New" -Destination $InstallWim

    Write-Host "Finish" -ForegroundColor Green

} else {

    Write-host "Failed" -ForegroundColor Red

}

```

15. Split, merge, compress, and convert

Solid compression is in ESD file format. If the file exceeds 4GB, it cannot be split and cannot be copied to a FAT32 disk. This is a disadvantage.

Using FAT32 format to store Windows installation boot is the best solution. If the Install.wim file exceeds 4GB and cannot be copied to a FAT32 disk, you need to split the Install.wim file and copy it to a FAT32 disk after the file size is less than 4GB.

It is particularly important to learn how to split and merge, solid compression and conversion.

15.1. Splitting and merging

15.1.1. Splitting

After splitting Install.wim into 4GB file sizes and getting new file names Install.*.swm, delete the old Install.wim.

- Install.Split.ps1
 - [\Expand\Install\Install.Split.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.Split.ps1

- Copy the code

```
Write-host "Split Install.wim into Install.*.swm";

Write-host "Splitting" -NoNewline;

Split-WindowsImage -ImagePath "D:\OS_11\sources\install.wim" -SplitImagePath "D:\OS_11\sources\install.swm"
-FileSize "4096" -CheckIntegrity -ErrorAction SilentlyContinue | Out-Null

Write-Host "Split Complete`n" -ForegroundColor Green

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_11\sources\install.swm" -PathType leaf) {

    Remove-Item -Path "D:\OS_11\sources\install.wim"

    Write-Host "Done" -ForegroundColor Green

} else {

    Write-Host "Failed" -ForegroundColor Red

}
```

15.1.2. Merge

After merging all Install.*.swm into Install.wim, delete the old Install.*.swm.

- Install.Merging.ps1
 - [\Expand\Install\Install.Merging.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.Merging.ps1

- Copy the code

```
Write-host "Merge all Install.*.swm files into Install.wim";

Get-WindowsImage -ImagePath "D:\OS_11\Sources\install.swm" -ErrorAction SilentlyContinue | ForEach-Object {

    Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;
```

```

Write-Host "Index Number: " -NoNewline;    Write-Host $_.ImageIndex -ForegroundColor Yellow;

Write-Host "Exporting".PadRight(28) -NoNewline

dism /export-image /SourceImageFile:"D:\OS_11\Sources\install.swm"
/swmfile:"D:\OS_11\sources\install*.swm" /SourceIndex:"$($_.ImageIndex)"
/DestinationImageFile:"D:\OS_11\Sources\install.wim" /Compress:"Max" /CheckIntegrity

Write-Host "Export Complete`n" -ForegroundColor Green

}

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_11\Sources\install.wim" -PathType leaf){

    Get-ChildItem -Path "D:\OS_11\sources" -Recurse -include "*.swm" | ForEach-Object {

        Write-Host "Delete: $($_.Fullname)" -ForegroundColor Green

        Remove-Item -Path $_.Fullname

    }

    Write-Host "Done" -ForegroundColor Green

} else {

    Write-Host "Falied" -ForegroundColor Green

}

```

15.2. Solid compressed ESD format and WIM format conversion

15.2.1. Solid compression

After solid compression, you can edit version information and application files, etc.; you cannot mount images, etc. After obtaining the new file install.esd, delete the old Install.wim.

- Install.Compress.ps1
 - [\Expand\Install\Install.Compress.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.Compress.ps1

- Copy the code

```

Write-host "Solid compressed Install.wim";

Get-WindowsImage -ImagePath "D:\OS_11\Sources\install.wim" -ErrorAction SilentlyContinue | ForEach-Object {

    Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;

    Write-Host "Index Number: " -NoNewline;    Write-Host $_.ImageIndex -ForegroundColor Yellow;

    Write-Host "Compressing".PadRight(28) -NoNewline

    dism /export-image /SourceImageFile:"D:\OS_11\Sources\install.wim" /SourceIndex:"$($_.ImageIndex)"
    /DestinationImageFile:"D:\OS_11\Sources\install.esd" /Compress:recovery /CheckIntegrity

    Write-Host "Compression completed`n" -ForegroundColor Green

}

```

```

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_11\Sources\install.esd" -PathType leaf) {

    Remove-Item -Path "D:\OS_11\Sources\install.wim"

    Write-Host "Done" -ForegroundColor Green

} else {

    Write-Host "Falied" -ForegroundColor Green

}

```

15.2.2. Convert compressed files to WIM file format

- Install.Convert.ps1
 - [\Expand\Install\Install.Convert.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/Install/Install.Convert.ps1

- Copy the code

```

Write-host "Convert ESD to WIM";

Get-WindowsImage -ImagePath "D:\OS_11\Sources\install.esd" -ErrorAction SilentlyContinue | ForEach-Object {

    Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;

    Write-Host "Index Number: " -NoNewline;    Write-Host $_.ImageIndex -ForegroundColor Yellow;

    Write-Host "Exporting".PadRight(28) -NoNewline

    try{

        Export-WindowsImage -SourceImagePath "D:\OS_11\Sources\install.esd" -SourceIndex $_.ImageIndex -
        DestinationImagePath "D:\OS_11\Sources\install.wim" -CompressionType "Max" -CheckIntegrity -ErrorAction
        SilentlyContinue | Out-Null

        Write-Host "Done`n" -ForegroundColor Green

    } catch {

        Write-Host $_ -ForegroundColor Yellow

        Write-host "Falied`n" -ForegroundColor Red

    }

}

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_11\Sources\install.wim" -PathType leaf) {

    Remove-Item -Path "D:\OS_11\Sources\install.esd"

    Write-Host "Done" -ForegroundColor Green

} else {

    Write-Host "Falied" -ForegroundColor Green

```

```
}
```

III Custom encapsulation boot.wim

1. View Boot.wim details

Image name, image description, image size, architecture, version, index number, etc.

```
$ViewFile = "D:\OS_11\Sources\Boot.wim"
```

```
Get-WindowsImage -ImagePath $ViewFile | Foreach-Object { Get-WindowsImage -ImagePath $ViewFile -index $_.ImageIndex }
```

2. Specify the path to mount Boot.wim

```
New-Item -Path "D:\OS_11_Custom\Boot\Boot\Mount" -ItemType directory
```

3. Start mounting Boot.wim

Default index number: 2

```
Mount-WindowsImage -ImagePath "D:\OS_11\sources\boot.wim" -Index "2" -Path "D:\OS_11_Custom\Boot\Boot\Mount"
```

4. Language pack: Boot

- Automatically install language packs: Get "Component: All installed packages in the image" and match them. After matching the corresponding names, install the local corresponding language pack files.
- When adding languages, different schema versions must be corresponded, and if not, errors are reported during the addition process.

4.1. Language pack: Add

- Boot.Instl.lang.ps1
 - [\Expand\Boot\Boot.Instl.lang.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/23H2/Expand/Boot/Boot.Instl.lang.ps1

- Copy the code

```
$Mount = "D:\OS_11_Custom\Boot\Boot\Mount"
```

```
$Sources = "D:\OS_11_Custom\Boot\Boot\Language\Add\zh-CN"
```

```
$Initl_install_Language_Component = @()
```

```
Get-WindowsPackage -Path $Mount | ForEach-Object {
```

```
    $Initl_install_Language_Component += $_.PackageName
```

```
}
```

```
Add-WindowsPackage -Path $Mount -PackagePath "$($Sources)\WinPE-FontSupport-zh-CN.cab"
```

```
$Language_List = @(
```

```
    @{ Match = "*WinPE*Setup*Client*Package*"; File = "WINPE-SETUP-CLIENT_zh-CN.CAB"; }
```

```
    @{ Match = "*WinPE*Setup*Package*"; File = "WinPE-Setup_zh-CN.cab"; }
```

```

@{ Match = "*WinPE-LanguagePack-Package*"; File = "lp.cab"; }

@{ Match = "*SecureStartup*"; File = "winpe-securestartup_zh-CN.cab"; }

@{ Match = "*ATBroker*"; File = "winpe-atbroker_zh-CN.cab"; }

@{ Match = "*AudioCore*"; File = "winpe-audiocore_zh-CN.cab"; }

@{ Match = "*AudioDrivers*"; File = "winpe-audiodrivers_zh-CN.cab"; }

@{ Match = "*EnhancedStorage*"; File = "winpe-enhancedstorage_zh-CN.cab"; }

@{ Match = "*Narrator*"; File = "winpe-narrator_zh-CN.cab"; }

@{ Match = "*scripting*"; File = "winpe-scripting_zh-CN.cab"; }

@{ Match = "*Speech-TTS*"; File = "winpe-speech-tts_zh-CN.cab"; }

@{ Match = "*srh*"; File = "winpe-srh_zh-CN.cab"; }

@{ Match = "*srt*"; File = "winpe-srt_zh-CN.cab"; }

@{ Match = "*wds-tools*"; File = "winpe-wds-tools_zh-CN.cab"; }

@{ Match = "*-WMI-Package*"; File = "winpe-wmi_zh-CN.cab"; }

)

ForEach ($Rule in $Language_List) {

    Write-host "`n Rule name: $($Rule.Match)" -ForegroundColor Yellow; Write-host "  $('-' * 80)"

    ForEach ($Component in $Initl_install_Language_Component) {

        if ($Component -like "*$($Rule.Match)*") {

            Write-host "  Component name: " -NoNewline

            Write-host $Component -ForegroundColor Green

            Write-host "  Language pack file: " -NoNewline

            Write-host "$($Sources)\$($Rule.File)" -ForegroundColor Green

            Write-Host "  Installing ".PadRight(22) -NoNewline

            try {

                Add-WindowsPackage -Path $Mount -PackagePath "$($Sources)\$($Rule.File)" | Out-Null

                Write-host "Finish" -ForegroundColor Green

            } catch {

                Write-host "Failed" -ForegroundColor Red

            }

            break

        }

    }

}

```

4.2. Offline image language: change

4.2.1. Change default language, regional settings, and other international settings

Region: zh-CN

```
Dism /Image:"D:\OS_11_Custom\Boot\Boot\Mount" /Set-AllIntl:"zh-CN"
```

4.2.2. View available language settings

```
Dism /Image:"D:\OS_11_Custom\Boot\Boot\Mount" /Get-Intl
```

4.3. Components: All packages installed in the image

4.3.1. View

```
Get-WindowsPackage -Path "D:\OS_11_Custom\Boot\Boot\Mount" | Out-GridView
```

4.3.2. Export to csv

```
$SaveTo = "D:\OS_11_Custom\Boot\Boot\Report.Components.$(Get-Date -Format "yyyyMMddHHmmss").csv"
```

```
Get-WindowsPackage -Path "D:\OS_11_Custom\Boot\Boot\Mount" | Export-CSV -NoType -Path $SaveTo
```

```
Write-host $SaveTo -ForegroundColor Green
```

4.4. Language: Repair

4.4.1. Extract

Open: D:\OS_11_Custom\Install\Install\Language\Add\zh-CN\Microsoft-Windows-Client-Language-Pack_x64_zh-CN.cab, enter the directory: Setup\sources\zh-cn\cli, and copy the following files to the deskto:

4.4.1.1. arunres.dll.mui

4.4.1.2. spwizres.dll.mui

4.4.1.3. w32uires.dll.mui

4.4.2. Copy

Copy the extracted files to: D:\OS_11_Custom\Boot\Boot\Mount\sources\zh-CN

4.5. Language packs: sync to ISO installer

```
Copy-Item -Path "D:\OS_11_Custom\Boot\Boot\Mount\sources\zh-CN" -Destination "D:\OS_11\sources\zh-CN" -Recurse -Force
```

4.6. Regenerate Lang.ini

After regeneration, you can adjust the "Installation Interface", the order when selecting "Language", open lang.ini, the default preferred value = 3, non-default value = 2.

4.6.1. Regenerate the mounted directory lang.ini

Regenerated Lang.ini file location: D:\OS_11_Custom\Boot\Boot\Mount\Sources\lang.ini

```
Dism /image:"D:\OS_11_Custom\Boot\Boot\Mount" /gen-langini /distribution:"D:\OS_11_Custom\Boot\Boot\Mount"
```

4.6.2. After regenerating lang.ini, sync to the installer

Regenerated Lang.ini file location: `D:\OS_11\Sources\lang.ini`

```
Dism /image:"D:\OS_11_Custom\Boot\Boot\Mount" /gen-langini /distribution:"D:\OS_11"
```

5. Cumulative updates

To prepare the cumulative updates file available, change the example file name: `KB_Boot.cab`

5.1. Add

```
$KBPath = "D:\OS_11_Custom\Boot\Boot\Update\KB_Boot.cab"
```

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Boot\Boot\Mount" -PackagePath $KBPath
```

5.2. Delete

```
$KBPath = "D:\OS_11_Custom\Boot\Boot\Update\KB_Boot.cab"
```

```
Remove-WindowsPackage -Path "D:\OS_11_Custom\Boot\Boot\Mount" -PackagePath $KBPath
```

5.3. Solid update

It cannot be uninstalled after curing, which cleans the recovery image and resets the basis of any superseded components.

```
Dism /image:"D:\OS_11_Custom\Boot\Boot\Mount" /cleanup-image /StartComponentCleanup /ResetBase
```

5.3.1. Clean components after curing and updating

```
$Mount = "D:\OS_11_Custom\Boot\Boot\Mount"
```

```
Get-WindowsPackage -Path $Mount -ErrorAction SilentlyContinue | ForEach-Object {
```

```
    if ($_.PackageState -eq "Superseded") {
```

```
        Write-Host " $($_.PackageName)" -ForegroundColor Green
```

```
        Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null
```

```
    }
```

```
}
```

6. Drive

7. Other

7.1. Bypass TPM check during installation

- `Boot.Bypass.TPM.ps1`
 - `\Expand\Boot\Boot.Bypass.TPM.ps1`
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/23H2/Expand/Boot/Boot.Bypass.TPM.ps1

- Copy the code

```
$RegSystem = "D:\OS_11_Custom\Boot\Boot\Mount\Windows\System32\Config\SYSTEM"

$RandomGuid = [guid]::NewGuid()

Write-Host " HKLM:\$($RandomGuid)"

New-PSDrive -PSProvider Registry -Name OtherTasksTPM -Root HKLM -ErrorAction SilentlyContinue | Out-Null

Start-Process reg -ArgumentList "Load ""HKLM\$($RandomGuid)"" ""$($RegSystem)"" -Wait -WindowStyle Hidden -ErrorAction SilentlyContinue

New-Item "HKLM:\$($RandomGuid)\Setup\LabConfig" -force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\$($RandomGuid)\Setup\LabConfig" -Name "BypassCPUCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\$($RandomGuid)\Setup\LabConfig" -Name "BypassStorageCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\$($RandomGuid)\Setup\LabConfig" -Name "BypassRAMCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\$($RandomGuid)\Setup\LabConfig" -Name "BypassTPMCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\$($RandomGuid)\Setup\LabConfig" -Name "BypassSecureBootCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

[gc]::collect()

Start-Process reg -ArgumentList "unload ""HKLM\$($RandomGuid)"" -Wait -WindowStyle Hidden -ErrorAction SilentlyContinue

Remove-PSDrive -Name OtherTasksTPM
```

8. Save image: Boot.wim

```
Save-WindowsImage -Path "D:\OS_11_Custom\Boot\Boot\Mount"
```

9. Unmount image: Boot.wim

Close any applications that may be accessing files in the image, including File Explorer.

```
Dismount-WindowsImage -Path "D:\OS_11_Custom\Boot\Boot\Mount" -Discard
```

IV Deployment engine

- Learn about "Automatically Adding Languages Installed in Windows Systems", learn: <https://github.com/ilikeyi/Multilingual>, how to download:
 - After entering the website, click "Code", "Download Compressed Package", and after the download is completed, you will get the [main.zip](#) compressed package file.
 - Go to the <https://github.com/ilikeyi/Multilingual/releases> download page, select the available version: [1.1.1.1](#), select the download source code format: zip, and get the [Multilingual-1.1.1.1.zip](#) compressed package file after the download is completed;
- Unzip the downloaded [main.zip](#) or [Multilingual-1.1.1.1.zip](#) to: [D:\Multilingual-1.1.1.1](#), and rename: [D:\Multilingual](#)
- Learn "[Unattended Windows Setup Reference](#)", Intervene in the installation process by leaving it unattended.

1. Add method

1.1. Add to ISO installation media

1.1.1. Unattended

1.1.1.1. Add to: [ISO]:\Autounattend.xml

Autounattend.xml interferes with the WinPE installer when booting an ISO installation.

Copy D:\Multilingual\Learn\Unattend\Mul.Unattend.xml to D:\OS_11\Autounattend.xml

```
Copy-Item "D:\Multilingual\Learn\Unattend\Mul.Unattend.xml" -Destination "D:\OS_11\Autounattend.xml" -Force
```

1.1.1.2. Add to: [ISO]:\Sources\Unattend.xml

When mounting or unpacking an ISO, after running the [ISO]:\Setup.exe installer, [ISO]:\Sources\Unattend.xml will intervene in the installation process.

Copy D:\Multilingual\Learn\Unattend\Mul.Unattend.xml to D:\OS_11\Sources\Unattend.xml

```
Copy-Item "D:\Multilingual\Learn\Unattend\Mul.Unattend.xml" -Destination "D:\OS_11\Sources\Unattend.xml" -Force
```

1.1.1.3. Add to: [ISO]:\sources\\$\OEM\$\\$\Panther\unattend.xml

Copy it to the system disk during the installation process, copy to: {system disk}\Windows\Panther\unattend.xml

1.1.1.3.1. Create \$OEM\$ path

```
New-Item -Path "D:\OS_11\sources\`$OEM$\`$$\Panther" -ItemType Directory
```

1.1.1.3.2. Copy

Copy D:\Multilingual\Learn\Unattend\Mul.Unattend.xml to D:\OS_11\Sources\\$\OEM\$\Panther\Unattend.xml

```
Copy-Item "D:\Multilingual\Learn\Unattend\Mul.Unattend.xml" -Destination "D:\OS_11\sources\`$OEM$\`$$\Panther\Unattend.xml" -Force
```

1.1.2. Deployment engine: add

Add "Automatically add installed languages for Windows systems" to D:\OS_11\sources\\$\OEM\$\\$1\Yi\Engine in the directory.

1.1.2.1. Deployment Engine: Copy

Copy D:\Multilingual\Engine to D:\OS_11\Sources\\$\OEM\$\\$1\Yi\Engine

```
Copy-Item "D:\Multilingual\Engine" -Destination "D:\OS_11\sources\`$OEM$\`$1\Yi\Engine" -Recurse -Force
```

1.1.2.2. Deployment engine: custom deployment tags

```

$Flag = @(

    "Is_Mark_Sync" # Allow global search and synchronization of deployment tags

    # Prerequisite deployment

#   "Auto_Update" # Allow automatic updates

#   "Use_UTF8" # Beta: Global language support using Unicode UTF-8

    "Disable_Network_Location_Wizard" # Network Location Wizard

    "Disable_Cleanup_Appx_Tasks" # Appx Cleanup and maintenance tasks

    "Disable_Cleanup_On_Demand_Language" # Prevent cleanup of unused on-demand feature language
packs

    "Disable_Cleanup_Unsed_Language"   # Prevent cleaning of unused language packs

    "Prerequisites_Reboot" # Restart your computer

    # Complete first deployment

#   "Popup_Engine" # Allow the deployment engine main interface to pop up for the first time

#   "Allow_First_Pre_Experience" # Allow first preview, as planned

    "Reset_Execution_Policy" # Restore PowerShell execution policy: Restricted

    "Clear_Solutions" # Delete the entire solution

    "Clear_Engine" # Delete the deployment engine and keep the others

#   "First_Experience_Reboot" # Restart your computer

)

ForEach ($item in $Flag) {

    Write-host "  $($item)" -ForegroundColor Green

    New-Item -Path "D:\OS_11\sources\`$OEM$\`$1\Yi\Engine\Deploy\Allow" -ItemType Directory -
ErrorAction SilentlyContinue | Out-Null

    Out-File -FilePath "D:\OS_11\sources\`$OEM$\`$1\Yi\Engine\Deploy\Allow\$( $item)" -Encoding utf8 -
ErrorAction SilentlyContinue

}

```

1.2. Add to mounted

Through "[Custom encapsulation: Install.wim](#)", execute "[Start mounting Install.wim](#)" and mount to:

[D:\OS_11_Custom\Install\Install\Mount](#)

1.2.1. Unattended

Copy [D:\Multilingual\Learn\Unattend\Mul.Unattend.xml](#) to
[D:\OS_11_Custom\Install\Install\Mount\Panther\Unattend.xml](#)

```
Copy-Item "D:\Multilingual\Learn\Unattend\Mul.Unattend.xml" -Destination
"D:\OS_11_Custom\Install\Install\Mount\Panther" -Force
```

1.2.2. Deployment engine: add

Add "Automatically add languages installed on Windows systems" to the
D:\OS_11_Custom\Install\Install\Mount\Yi\Engine directory.

1.2.2.1. Deployment Engine: Copy

Copy D:\Multilingual\Engine to D:\OS_11_Custom\Install\Install\Mount\Yi\Engine

Copy-Item "D:\Multilingual\Engine" -Destination "D:\OS_11_Custom\Install\Install\Mount\Yi\Engine" -
Recurse -Force

1.2.2.2. Deployment engine: custom deployment tags

```
$Flag = @(

    "Is_Mark_Sync" # Allow global search and synchronization of deployment tags

    # Prerequisite deployment

    # "Auto_Update" # Allow automatic updates

    # "Use_UTF8" # Beta: Global language support using Unicode UTF-8

    "Disable_Network_Location_Wizard" # Network Location Wizard

    "Disable_Cleanup_Appx_Tasks" # Appx Cleanup and maintenance tasks

    "Disable_Cleanup_On_Demand_Language" # Prevent cleanup of unused on-demand feature language
packs

    "Disable_Cleanup_Unsed_Language" # Prevent cleaning of unused language packs

    "Prerequisites_Reboot" # Restart your computer

    # Complete first deployment

    # "Popup_Engine" # Allow the deployment engine main interface to pop up for the first time

    # "Allow_First_Pre_Experience" # Allow first preview, as planned

    "Reset_Execution_Policy" # Restore PowerShell execution policy: Restricted

    "Clear_Solutions" # Delete the entire solution

    "Clear_Engine" # Delete the deployment engine and keep the others

    # "First_Experience_Reboot" # Restart your computer

)

ForEach ($item in $Flag) {

    Write-host " $($item)" -ForegroundColor Green

    New-Item -Path "D:\OS_11\sources\`$OEM$\`$1\Yi\Engine\Deploy\Allow" -ItemType Directory -
ErrorAction SilentlyContinue | Out-Null

    Out-File -FilePath "D:\OS_11\sources\`$OEM$\`$1\Yi\Engine\Deploy\Allow\$( $item)" -Encoding utf8 -
ErrorAction SilentlyContinue

}
```

2. Deployment Engine: Advanced

2.1. Deployment engine: adding process

After copying the deployment engine, you can add deployment tags to intervene in the installation process.

2.2. Unattended solution

When the customization is unattended, please modify it simultaneously if the following files exist:

- `D:\OS_11\Autounattend.xml`
- `D:\OS_11\Sources\Unattend.xml`
- `D:\OS_11\sources\\OEM\$$\Panther\unattend.xml`
- `D:\OS_11_Custom\Install\Install\Mount\Panther\Unattend.xml`

2.2.1. Multilingual or monolingual

In multi-language and monolingual, you can switch between each other. When replacing, please replace all the same ones in the file.

2.2.1.1. Multi-language

```
<UILanguage>%OSDUILanguage%</UILanguage>

<InputLocale>%OSDInputLocale%</InputLocale>

<SystemLocale>%OSDSysLocale%</SystemLocale>

<UILanguage>%OSDUILanguage%</UILanguage>

<UILanguageFallback>%OSDUILanguageFallback%</UILanguageFallback>

<UserLocale>%OSDUserLocale%</UserLocale>
```

2.2.1.2. Monolingual

A single language needs to specify a Region tag, for example, specify a Region tag: `zh-CN`

```
<UILanguage>zh-CN</UILanguage>

<InputLocale>zh-CN</InputLocale>

<SystemLocale>zh-CN</SystemLocale>

<UILanguage>zh-CN</UILanguage>

<UILanguageFallback>zh-CN</UILanguageFallback>

<UserLocale>zh-CN</UserLocale>
```

2.2.2. User plan

By default, the self-created user `Administrator` is used and logged in automatically. It can be switched by modifying the following configuration: self-created or customized user.

2.2.2.1. Self-created user Administrator

By default, the self-created user: Administrator is used and logged in automatically, inserted between <OOBE> and </OOBE>.

```
<UserAccounts>

<LocalAccounts>

  <LocalAccount wcm:action="add">

    <Password>

      <Value></Value>

      <PlainText>true</PlainText>

    </Password>

    <Description>Administrator</Description>

    <DisplayName>Administrator</DisplayName>

    <Group>Administrators</Group>

    <Name>Administrator</Name>

  </LocalAccount>

</LocalAccounts>

</UserAccounts>

<AutoLogon>

  <Password>

    <Value></Value>

    <PlainText>true</PlainText>

  </Password>

  <Enabled>true</Enabled>

  <Username>Administrator</Username>

</AutoLogon>
```

2.2.2.2. Custom user

After setting up a custom user and installing the system, in OOBE, you can choose settings such as local and online users.

2.2.2.2.1. Delete

Username: Removed from start <UserAccounts> to </UserAccounts>
Autologin: Remove from start <AutoLogon> to </AutoLogon>

2.2.2.2.2. Replace

From the beginning <OOBE> to </OOBE>

```
<OOBE>

<ProtectYourPC>3</ProtectYourPC>

<HideEULAPage>true</HideEULAPage>

<HideWirelessSetupInOOBE>true</HideWirelessSetupInOOBE>

</OOBE>
```

D. ISO

II Generate ISO

1. Download OScding

Select the OScding version according to the architecture, and save it to: **D:** after downloading. To save in other paths, please enter the absolute path of OScding.exe;

1.1. x64

https://github.com/ilikeyi/Solutions/raw/refs/heads/main/_Encapsulation/Modules/AIO/Oscding/amd64/oscding.exe

1.2. x86

https://github.com/ilikeyi/Solutions/raw/refs/heads/main/_Encapsulation/Modules/AIO/Oscding/x86/oscding.exe

1.3. arm64

https://github.com/ilikeyi/Solutions/raw/refs/heads/main/_Encapsulation/Modules/AIO/Oscding/arm64/oscding.exe

2. Use the oscding command line to generate an ISO file and save it to: **D:\OS_11.iso**

- ISO.ps1
 - [\Expand\ISO.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/23H2/Expand/ISO.ps1

• Copy the code

```
$Oscding = "D:\Oscding.exe"

$ISO = "D:\OS_11"

$Volume = "OS_11"

$SaveTo = "D:\OS_11.iso"

$Arguments = @("-m", "-o", "-u2", "-udfver102", "-l"`${$Volume}`"", "-bootdata:2#p0,e,b"`${$ISO}\boot\etfsboot.com`"#pEF,e,b"`${$ISO}\efi\microsoft\boot\efisys.bin`"", $ISO, $SaveTo)

Start-Process -FilePath $Oscding -ArgumentList $Arguments -wait -nonewwindow
```

III Bypass TPM installation check

1. Learn about: <https://github.com/AveYo/MediaCreationTool.bat/tree/main/bypass11> and download: [Quick_11_iso_esd_wim_TPM_toggle.bat](#)

2. Drag the `D:\OS_11.iso` file to `Quick_11_iso_esd_wim_TPM_toggle.bat`, and "add" or "delete" the TPM installation check function in reverse order.

Chapter 2 Common problem

II Clean all mounts to

Close any applications that may be accessing files in the image, including File Explorer.

```
Dismount-WindowsImage -Path "D:\OS_11_Custom\Install\Install\Mount" -Discard
```

```
Dismount-WindowsImage -Path "D:\OS_11_Custom\Install\WinRE\Mount" -Discard
```

```
Dismount-WindowsImage -Path "D:\OS_11_Custom\Boot\Boot\Mount" -Discard
```

III Fix the problem of abnormal mounting

1. View mounted

```
Get-WindowsImage -Mounted
```

2. Delete the DISM mount record saved in the registry

```
Remove-Item -Path "HKLM:\SOFTWARE\Microsoft\WIMMount\Mounted Images\*" -Force -Recurse -ErrorAction SilentlyContinue
```

3. Delete all resources associated with the corrupted mounted image

```
Clear-WindowsCorruptMountPoint
```

```
Dism /cleanup-wim
```

IV Clean up

A large number of temporary files will be generated during the packaging process. Installation files will be temporarily released when installing InBox Apps applications, installing cumulative updates, and installing language packs. Therefore, unscheduled cleaning of outdated ones will occupy a large amount of disk space for a long time. It is recommended that you try the following methods to achieve this. Cleanup plan to free up more space:

1. Common logs

1.1. Clean using the command line

```
$TempPaths = @( $env:Temp; "$($env:SystemRoot)\Logs\DISM"; )
```

```
foreach ($TempPath in $TempPaths) {
```

```
    if (Test-Path -Path $TempPath) {
```

```
        write-host " $($TempPath)" -ForegroundColor Green
```

```
        Get-ChildItem -Path $TempPath -Recurse -Force | ForEach-Object {
```

```
            try{
```

```
                Remove-Item $_.FullName -Force -Recurse -ErrorAction SilentlyContinue | Out-Null
```

```
            } catch {
```

```
                write-host $_ -ForegroundColor Red
```

```
}  
  
}  
  
}  
  
}
```

1.2. Manual deletion

1.2.1. DISM log

Using the "Disk Cleanup" function, the logs generated by DISM cannot be cleaned and need to be deleted manually. Path: {system disk}\Windows\Logs\DISM

1.2.2. Temporary directory

Using the "Disk Cleanup" function, files in the temporary directory cannot be cleaned and manual operation is required.
Run: %Temp% to quickly locate and open the temporary directory. Path: {system disk}\Users\{username}\AppData\Local\Temp

1.2.3. Clear the command line records of "Terminal"

```
Remove-Item -Path (Get-PSReadlineOption).HistorySavePath -ErrorAction SilentlyContinue
```

After cleaning up command line records, you need to restart the "Terminal" to take effect.

2. Disk cleanup

Run `cleanmgr`, selecting the disks and types to clean.

Chapter 3	Known issues
	None yet
