## Custom Office Deployment

After downloading the template file Yi.Engine.Deploy.Rule.iso, extract it to any drive (for example, to D:\Yi), select the desired version, and then run the download script:

1. Office 365 | & "D:\Yi\Office\365\amd64\Download.Office.amd64.ps1" | & "D:\Yi\Office\365\amd64\Download.Office.x86.ps1"
2. Office 2024 | & "D:\Yi\Office\2024\amd64\Download.Office.amd64.ps1" | & "D:\Yi\Office\2024\amd64\Download.Office.x86.ps1"
3. Office 2021 | & "D:\Yi\Office\2021\amd64\Download.Office.amd64.ps1" | & "D:\Yi\Office\2021\amd64\Download.Office.x86.ps1"

Before installation, please download the Office installation package. After the download is complete, search in this order: 365, 2024, 2021; if a usable installation package is found, the initial deployment will search for the Yi.ps1 file and execute the Office installation process.

Manual execution: Running D:\Yi\Office\{ 365 | 2024 | 2021 }\{ amd64 | x86 }\Office\Install.Office.ps1 will start the installation process.

Sustainability:

Custom deployment: By using a portable USB drive, you can save the Yi directory to a partition on the USB drive. Keep the USB drive connected throughout the system installation process, and the custom deployment strategy will run automatically.

## Verify Download

If you would like to verify the data integrity and authenticity of your download, you can follow these steps:

### A. Verify the hash value

- Download the ISO file and learn how to deploy the operating system ( [https://github.com/liikeyi/Solutions/tree/main/\\_Learn/Deploy](https://github.com/liikeyi/Solutions/tree/main/_Learn/Deploy) )
- Launch Windows PowerShell. If you need help finding the location of PowerShell for your operating system, you can get help here.
- In PowerShell, compute the hash value for the ISO file you downloaded by using Get-FileHash. For example: `Get-FileHash "D:\OS.iso" -Algorithm SHA256`
- If the SHA256 output matches the value listed in the last 64 bits of the filename of the product you downloaded, it confirms that the file has not been corrupted, tampered with, or altered.

For more information on the Get-FileHash command, see Get-FileHash (Microsoft.PowerShell.Utility).

B. If an ASC file is provided, you can verify if it was published by Yi. Learn more here: <https://fengyi.tel/pgp>

## Illustrate

Learn: Microsoft Windows "Attain" series ( <https://fengyi.tel/os> )

Package event code: 26S1 ( 26 = 2026, S = quarter, 1 = Q1 ), this system is packaged by Yi's Solutions v1.1.5.0 autopilot ( Usage plan: Additional edition ), go to learn or customize the package: <https://fengyi.tel/solutions>, <https://github.com/liikeyi/solutions>

Health refers to whether all integrated image versions have passed the health check. A status of "Passed" indicates that the system version is not corrupted; "Failed" indicates that there is damage to the image content or problems occurred during the packaging process.

Windows 10 support will end on October 14, 2025. The monthly security update in October 2025 will be the last update for the last supported version: Microsoft Windows 10 22H2 19045.6456, Package event 26S1 is the final released version and will not receive further updates. ## 验证下载

如果您想验证下载数据的完整性和真实性, 可以按照以下步骤操作:

### A. 校验哈希值

- 下载 ISO 文件并学习如何部署操作系统 ( [https://github.com/ilikeyi/Solutions/tree/main/\\_Learn/Deploy](https://github.com/ilikeyi/Solutions/tree/main/_Learn/Deploy) )
- 启动 Windows PowerShell。如果您需要帮助查找适用于您操作系统的 PowerShell 位置, 可以点击[此处](#)获取帮助。
- 在 PowerShell 中, 使用 Get-FileHash 计算已下载 ISO 文件的哈希值。例如: `Get-FileHash "D:\OS.iso" -Algorithm SHA256`
- 如果 SHA256 输出与您下载的产品在文件名后 64 位中列出的值匹配, 则确认该文件未损坏、篡改或更改。

有关 Get-FileHash 命令的更多信息, 请参阅 [Get-FileHash \(Microsoft.PowerShell.Utility\)](#)。

### B. 如果提供了 ASC 文件, 可验证是否由 Yi 发布的, 前往学习: <https://fengyi.tel/pgp>
