

MICROSOFT WINDOWS 11 24H2 AND 25H2

PACKAGING TUTORIAL: Different system versions have different packaging methods. The packaging process includes: "Language pack: add, associate, delete", "Drive: add, delete", "Cumulative update: add, delete", "InBox Apps: add, Update, mark" etc.

There are many hidden stories hidden behind this. If you want to unlock these, are you ready to start trying to encapsulate them?

Summary

A. Prerequisites

I. Running system

1. When using the DISM command to create a higher version image

When the operating system you are running is Windows 10 or lower than Windows 11 25H2, in some cases, using the DISM command to create a higher version image will cause some unknown problems. For example, when running the DISM command in the Windows 10 operating system to process the Windows Server 2025 offline image, you may receive an error message during the packaging process: "This application cannot run on your computer." Solution:

1.1. Upgrade the running operating system or reinstall to a higher version (recommended);

1.2. Upgrade or install a new version of ADK or PowerShell (not recommended)

1.2.1. You can try to upgrade to the latest PowerShell 7 or higher version;

1.2.2. After installing the latest version of ADK and replacing the DISM command, the problem of low DISM version can be solved. However, the command line mainly used by the packaging script is the PowerShell command line, so it is not recommended that you use the above method. The best method is to upgrade the running operating system or reinstall to a higher version.

2. Disk partition

2.1. After mounting an offline image to a REFS disk partition, some DISM commands may fail to execute properly. NTFS disk partitions are not affected by this.

2.2. After the ISO is decompressed, its location is not affected by the REFS partition.

3. N ways to speed up Windows operating system

When processing packaging tasks, installing cumulative updates, installing drivers, and installing applications in InBox Apps, a large number of temporary files will be generated. The following methods can be used to speed up the system:

3.1. Turn off Windows Security Center

- Turning on Windows Security Center will scan files and take up a lot of CPU.
- During the test: It took 1 hour and 22 minutes before it was turned off, and 20 minutes after it was turned off.

How to turn off:

Green is the command line, hold down the Windows key and press R to launch Run.

3.1.1. Open Windows Security Center or run: [windowsdefender](#):

3.1.2. Select "Virus & threat protection" or run: [windowsdefender://threat](#)

3.1.3. Find "Virus and Threat Protection Settings", click "Manage Settings" or run: [windowsdefender://threatsettings](#). It is recommended that you turn off some features:

3.1.3.1. Real-time protection

3.1.3.2. Cloud-provided protection

3.1.3.3. Automatically submit samples

3.1.3.4. Tamper Protection

3.1.4. When not in the package, it is recommended that you turn on Windows Security Center.

3.2. Turn off virtualization-based security

Even after closing Windows Security Center, virtualization-based security is still running, and the system running speed will be greatly reduced. The speed improvement is obvious after closing it.

3.2.1. After running, restart your computer

```
dism /Online /Disable-Feature:microsoft-hyper-v-all /NoRestart  
dism /Online /Disable-Feature:IsolatedUserMode /NoRestart  
dism /Online /Disable-Feature:Microsoft-Hyper-V-Hypervisor /NoRestart  
dism /Online /Disable-Feature:Microsoft-Hyper-V-Online /NoRestart  
dism /Online /Disable-Feature:HypervisorPlatform /NoRestart  
mountvol X: /s  
cmd /c copy /y %WINDIR%\System32\SecConfig.efi X:\EFI\Microsoft\Boot\SecConfig.efi  
bcdedit /create {0cb3b571-2f2e-4343-a879-d86a476d7215} /d "DebugTool" /application osloader  
bcdedit /set {0cb3b571-2f2e-4343-a879-d86a476d7215} path "\EFI\Microsoft\Boot\SecConfig.efi"  
bcdedit /set {bootmgr} bootsequence {0cb3b571-2f2e-4343-a879-d86a476d7215}  
bcdedit /set {0cb3b571-2f2e-4343-a879-d86a476d7215} loadoptions DISABLE-LSA-ISO,DISABLE-VBS  
bcdedit /set {0cb3b571-2f2e-4343-a879-d86a476d7215} device partition=X:  
mountvol X: /d  
bcdedit /set hypervisorlauchtype off
```

3.2.2. View Status

Run [Msinfo32](#) and check the "Virtualization-based Security" status in the system summary.

4. ISO tools

Use a software that can edit ISO files, such as: [PowerISO](#), [DAEMON Tools](#), [ISO Workshop](#);

5. Compression software

Prepare a commonly used compression software: [7-Zip](#), [WinRAR](#), or others. We recommend downloading and installing [7-Zip](#). Choose the appropriate software based on your system architecture.

5.1. 7-Zip

x64: <https://www.7-zip.org/a/7z2501-x64.exe>

x86: <https://www.7-zip.org/a/7z2501.exe>

arm64: <https://www.7-zip.org/a/7z2501-arm64.exe>

6. Command line

6.1. Optional "Terminal" or "PowerShell ISE", if "Terminal" is not installed, please go to: <https://github.com/microsoft/terminal/releases>
After downloading:

6.2. Open "Terminal" or "PowerShell ISE" as administrator, it is recommended to set the PowerShell execution policy: bypass, PS command line:

```
Set-ExecutionPolicy -ExecutionPolicy Bypass -Scope LocalMachine -Force
```

6.3. In this article, PS command line, green part, please copy it, paste it into the "Terminal" dialog box, press Enter and start running;

6.4. When there is .ps1, right-click the file and select Run with PowerShell, or copy the path and paste it into Terminal to run, the path with a colon, add the & character in the command line, example: & "D:\YiSolutions_Encapsulation_SIP.ps1"

II Requirements

1. System installation package

Keywords: iteration, cross-version, major version, cumulative update, initial release

1.1. illustrate

1.1.1. When creating Windows 11 24H2 and 25H2, please use the initial build of Windows 11 24H2 (26100.1742);

1.1.2. Please re-create the image for each version update. For example, when jumping from 24H2 to 25H2, avoid other compatibility issues and do not create based on the old image;

1.1.3. The regulation has been clearly communicated to packagers in various forms by some OEMs, and direct upgrades from iterative versions are not allowed;

1.1.4. Please use "Initial Version" and "Developer Edition" for production. There was a brief appearance in the official Microsoft documentation that the initial version must be used in production, but this sentence was later deleted in the official documentation;

1.1.5. After installing the language pack, you must re-add the cumulative update (the same version number), and if you do not add the cumulative update, problems such as "garbled characters" and "interface flashback" will occur.

1.1.6. Evolution process: Microsoft Windows 11 24H2, Build 26100.1742 +

- Checkpoint Update (KB5054156)

- Service Stack Update (SSU) + Cumulative Update (KB5070311)

= OS Build 26200.7309

1.2. Prepare to download the initial or developer version

1.2.1. x64

List of files: <https://files.rg-adguard.net/file/bacf17e5-a307-5a01-1a35-71268dc0c2e3>

1.2.2.4. Filename: [en-us_windows_11_iot_enterprise_ltsc_2024_arm64_dvd_ec517836.iso](https://files.rg-adguard.net/file/de2234af-1514-ff50-50af-5a3395549c42)

List of files: <https://files.rg-adguard.net/file/de2234af-1514-ff50-50af-5a3395549c42>

1.3. After the sample download [en-us_windows_11_consumer_editions_version_24h2_x64_dvd_1d5fcad3.iso](https://files.rg-adguard.net/file/en-us_windows_11_consumer_editions_version_24h2_x64_dvd_1d5fcad3), Unzip to: [D:\en-us_windows_11_consumer_editions_version_24h2_x64_dvd_1d5fcad3](#)

Note: Before decompressing to disk D, you should check whether it is a ReFS partition. If it is a ReFS partition, some DISM commands will fail. Solution: Please use a disk partition in NTFS format.

1.4. After decompression is complete, change the directory [D:\en-us_windows_11_consumer_editions_version_24h2_x64_dvd_1d5fcad3](#) change to [D:\OS_11](#)

1.5. How to merge multiple image versions? Merge suggestions:

1.5.1. After downloading [en-us_windows_11_business_editions_version_24h2_x64_dvd_59a1851e.iso](https://files.rg-adguard.net/file/en-us_windows_11_business_editions_version_24h2_x64_dvd_59a1851e), select this file and "Double-click" or right-click and select "Mount," for example, mount the drive letter as [E:\](#) (Please replace if it's not the correct one), It is recommended to add all of them. Known index numbers: [3](#), [4](#). Add command:

```
Export-WindowsImage -SourceImagePath "E:\sources\install.wim" -SourceIndex 3 -DestinationImagePath  
"D:\OS_11\sources\install.wim" -CompressionType Max -CheckIntegrity
```

```
Export-WindowsImage -SourceImagePath "E:\sources\install.wim" -SourceIndex 4 -DestinationImagePath  
"D:\OS_11\sources\install.wim" -CompressionType Max -CheckIntegrity
```

- 1.5.2. After downloading [en-us_windows_11_iot_enterprise_version_24h2_x64_dvd_3a99b72b.iso](#), select this file and "Double-click" or right-click and select "Mount," for example, mount the drive letter as [F:\:](#) (Please replace if it's not the correct one), It is recommended to add all of them. Known index numbers: [2](#), [3](#). Add command:

```
Export-WindowsImage -SourceImagePath "F:\sources\install.wim" -SourceIndex 2 -DestinationImagePath  
"D:\OS_11\sources\install.wim" -CompressionType Max -CheckIntegrity
```

```
Export-WindowsImage -SourceImagePath "F:\sources\install.wim" -SourceIndex 3 -DestinationImagePath  
"D:\OS_11\sources\install.wim" -CompressionType Max -CheckIntegrity
```

- 1.5.3. After downloading [en-us_windows_11_enterprise_ltsc_2024_x64_dvd_965cfb00.iso](#), select this file and "Double-click" or right-click and select "Mount," for example, mount the drive letter as [G:\:](#) (Please replace if it's not the correct one), It is recommended to add all of them. Known index numbers: [1](#), [2](#). Add command:

```
Export-WindowsImage -SourceImagePath "G:\sources\install.wim" -SourceIndex 1 -DestinationImagePath  
"D:\OS_11\sources\install.wim" -CompressionType Max -CheckIntegrity
```

```
Export-WindowsImage -SourceImagePath "G:\sources\install.wim" -SourceIndex 2 -DestinationImagePath  
"D:\OS_11\sources\install.wim" -CompressionType Max -CheckIntegrity
```

- 1.5.4. After downloading [en-us_windows_11_iot_enterprise_ltsc_2024_x64_dvd_f6b14814.iso](#), select this file and "Double-click" or right-click and select "Mount," for example, mount the drive letter as [H:\:](#) (Please replace if it's not the correct one), It is recommended to add all of them. Known index numbers: [2](#), [3](#). Add command:

```
Export-WindowsImage -SourceImagePath "H:\sources\install.wim" -SourceIndex 2 -DestinationImagePath  
"D:\OS_11\sources\install.wim" -CompressionType Max -CheckIntegrity
```

```
Export-WindowsImage -SourceImagePath "H:\sources\install.wim" -SourceIndex 3 -DestinationImagePath  
"D:\OS_11\sources\install.wim" -CompressionType Max -CheckIntegrity
```

Note: When merging multiple image versions, Ei.Cfg must be added.

1.6. Installation configuration

- 1.6.1. Learn: [Windows Setup Edition Configuration and Product ID Files \(Ei.cfg and PID.txt \)](#)

1.6.2. Known issues

- 1.6.2.1. When there is no [Ei.cfg](#), ISO boot installation will report an error when selecting certain versions, prompting: Windows cannot find the Microsoft Software License terms. Make sure the installation sources are valid and restart the installation.

- 1.6.2.2. How to solve it? Add [ei.cfg](#) to D:\OS_11\Sources and create [ei.cfg](#):

```
@"
```

```
[Channel]
```

```
volume
```

```
[VL]
```

```
1
```

```
"@ | Out-File -FilePath "D:\OS_11\sources\EI.CFG" -Encoding Ascii
```

1.7. All scripts and all paths are set to D:\OS_11 as the image source.

1.8. Report

Check the installed image package: language packs, associated language pack components, pre-installed InBox Apps applications and other detailed information. After downloading the report, use Excel software to open the .xlsx.

1.8.1. Report: Overview

Contains: ISO system installation package, image version, region, region association, associated language pack components, etc.

[Report.Overview.xlsx](#)

- o [\Expand\Install\Report.Overview.xlsx](#)
- o https://raw.githubusercontent.com/ilikeyi/solutions/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/Install/Report.Overview.xlsx

1.8.2. Report: Complete

Inclusion: ISO system installation package, image version, region, region association, associated language pack components, installed InBox Apps pre-installed applications, etc.

[en-us, ar-sa, bg-bg, cs-cz, da-dk, de-de, el-gr, en-gb, es-es, es-mx, et-ee, fi-fi, fr-ca, fr-fr, he-il, hr-hr, hu-hu, it-it, ja-jp, ko-kr, lt-lt, lv-lv, nb-no, nl-nl, pl-pl, pt-br, pt-pt, ro-ro, ru-ru, sk-sk, sl-si, sr-latn-rs, sv-se, th-th, tr-tr, uk-ua, zh-cn, zh-tw](#)

2. Language pack

2.1. Learn

As you read, please understand the important highlights of "Blue".

2.1.1. [Languages overview](#)

2.1.2. [Add languages to a Windows 11 image](#)

2.1.3. [Language and region Features on Demand \(FOD\)](#)

2.1.3.1. Fonts

- When adding a language pack, when the corresponding region is triggered, the required font functions need to be added, download "[List of all available language FODs](#)" learn more.
- In "Language Pack: Extract", the automatic recognition function has been added, and you can understand the functions: [Function Match_Required_Fonts](#)

2.1.3.2. Regional association

What are regional connections?

- When the image language is only in English, after adding the zh-HK language pack, the image language will not be added. You should install zh-TW first, and then install zh-HK to obtain the corresponding association.

Known regional associations:

2.1.3.2.1. Region: [ar-sa](#), Optional associated areas: [en-US](#), associated installation package:

- 2.1.3.2.1.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab
- 2.1.3.2.1.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab

- 2.1.3.2.2. Region: **bg-bg**, Optional associated areas: **en-US**, associated installation package:
 - 2.1.3.2.2.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.2.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab

- 2.1.3.2.3. Region: **da-dk**, Optional associated areas: **en-US**, associated installation package:
 - 2.1.3.2.3.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.3.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab

- 2.1.3.2.4. Region: **el-gr**, Optional associated areas: **en-US**, associated installation package:
 - 2.1.3.2.4.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.4.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab

- 2.1.3.2.5. Region: **fr-ca**, Optional associated areas: **en-US, fr-fr**, associated installation package:
 - 2.1.3.2.5.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.5.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.5.3. Microsoft-Windows-LanguageFeatures-Basic-fr-fr-Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.5.4. Microsoft-Windows-LanguageFeatures-Handwriting-fi-fi-Package~31bf3856ad364e35~amd64~~.cab

- 2.1.3.2.6. Region: **he-il**, Optional associated areas: **en-US**, associated installation package:
 - 2.1.3.2.6.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab
 - 2.1.3.2.6.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab

- 2.1.3.2.7. Region: **ru-ru**, Optional associated areas: **en-US**, associated installation package:
 - 2.1.3.2.7.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.7.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.8. Region: [th-th](#), Optional associated areas: [en-US](#), associated installation package:

2.1.3.2.8.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.8.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.9. Region: [uk-ua](#), Optional associated areas: [en-US](#), associated installation package:

2.1.3.2.9.1. Microsoft-Windows-LanguageFeatures-Basic-es-us-Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.9.2. Microsoft-Windows-LanguageFeatures-OCR-en-us-Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.10. Region: [zh-TW](#), Optional associated areas: [zh-HK](#), associated installation package:

2.1.3.2.10.1. Microsoft-Windows-LanguageFeatures-Basic-zh-hk-Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.10.2. Microsoft-Windows-LanguageFeatures-Speech-zh-hk-Package~31bf3856ad364e35~amd64~~.cab

2.1.3.2.10.3. Microsoft-Windows-LanguageFeatures-TextToSpeech-zh-hk-Package~31bf3856ad364e35~amd64~~.cab

2.1.3.3. Other region-specific requirements

When triggering a known area, a specific "package" needs to be added.

2.1.3.3.1. Region: [zh-TW](#)

Package: Microsoft-Windows-InternationalFeatures-Taiwan-Package~31bf3856ad364e35~amd64~~.cab

Description: Supplemental support for Taiwan date formatting requirements. Package will be provided to customers located in Taiwan.

Recommendation: Preinstall only on devices shipping to the Taiwan market. Not installing this capability on devices causes any API calls to that use the Taiwan calendar to fail.

THERE IS CONTROVERSY:

- During the test, it was found that this package was not installed in the original image of Microsoft's official original Windows 11. However, there are known issues in the recommended items. In the end, it is consistent with the official Microsoft original version, and the packager can freely choose to install it or not.

2.2. Language pack: Download

2.2.1. Download: https://software-static.download.prss.microsoft.com/dbazure/888969d5-f34g-4e03-ac9d-1f9786c66749/26100.1.240331-1435.ge_release_amd64fre_CLIENT_LOF_PACKAGES_OEM.iso

List of files: <https://files.rg-adguard.net/file/025cf5d-f5fa-7d00-246e-76c04a40e210>

3. InBox Apps

3.1. Download the latest InBox Apps installation package.

Download: https://software-static.download.prss.microsoft.com/dbazure/888969d5-f34g-4e03-ac9d-1f9786c66749/26100.6584.250904-1728.ge_release_svc_prod1_amd64fre_InboxApps.iso

List of files: <https://files.rg-adguard.net/file/ada764e8-717a-d080-099b-d3aa44b84dab>

3.2. Fix missing items and rollback to older versions

3.2.1. Microsoft.SecHealthUI

The installation package [Microsoft.SecHealthUI_8wekyb3d8bbwe.x64.appx](#) in the file [26100.6584.250904-1728.ge_release_svc_prod1_amd64fre_InboxApps.iso](#) contains version number [1000.26100.6584.00](#). Installing this version will prevent localization; you must use version [1000.26100.1.0](#). You can obtain this version through the following methods:

3.2.1.1. Download from Github

3.2.1.1.1. Microsoft.SecHealthUI_8wekyb3d8bbwe.x64.appx

https://github.com/ilkeyi/Solutions/raw/refs/heads/main/_Learn/Download.Package/Windws.11.25H2/Microsoft.SecHealthUI_8wekyb3d8bbwe.x64.appx

3.2.1.1.2. Microsoft.SecHealthUI_8wekyb3d8bbwe.arm64.appx

https://github.com/ilkeyi/Solutions/raw/refs/heads/main/_Learn/Download.Package/Windws.11.25H2/Microsoft.SecHealthUI_8wekyb3d8bbwe.arm64.appx

3.2.1.2. Search and download from uupdump.net

After opening <https://uupdump.net>: Select [Windows 11](#) in the menu bar, select [24H2](#) in the drop-down menu, and search for "[26100.2](#)" in the search bar. If no results are found, please search for other versions. After displaying all files, search for the name "[SecHealthUI](#)". Note whether the [SHA1](#) is the same. If not, search for other versions.

3.2.1.2.1. x64

- Opening https://uupdump.net/getfile.php?id=f85d43a4-60e9-4607-8997-a761beb7ef77&file=Microsoft.SecHealthUI_8wekyb3d8bbwe.appx displays the result: "Microsoft.SecHealthUI_8wekyb3d8bbwe.appx | SHA1: 81e1da943d518a7eddc92fa1bc572b42aa458e28 | 7.01 MiB".
- Select this file and download it. After downloading, you will get the file "[5bf271eb-c77f-4760-b6c8-08de575abc24](#)". Rename it to: [Microsoft.SecHealthUI_8wekyb3d8bbwe.x64.appx](#)

3.2.1.2.2. arm64

- Opening https://uupdump.net/getfile.php?id=a7c6c75e-5d2b-4d77-b7dd-5588614da877&file=Microsoft.SecHealthUI_8wekyb3d8bbwe.appx displays the result "Microsoft.SecHealthUI_8wekyb3d8bbwe.appx | SHA1: b1daf2046d448e9d0504661cf4cfdbb7e4cdbea2 | 8 MiB".
- Select this file and download it. After downloading, you will get the file "[1fb6d544-e4ee-470a-8402-76fdc849d97c](#)". Rename it to: Microsoft.SecHealthUI_8wekyb3d8bbwe.arm64.appx

3.2.2. Microsoft.HEVCVideoExtension

[26100.6584.250904-1728.ge_release_svc_prod1_amd64fre_InboxApps.iso](#) does not contain the Microsoft.HEVCVideoExtension_8wekyb3d8bbwe.appxbundle installation package file, you must use this version: 2.4.13.0, which can be obtained in the following ways:

3.2.2.1. If the file cannot be obtained, please download it manually:

3.2.2.1.1. Microsoft.HEVCVideoExtension_8wekyb3d8bbwe.appxbundle

3.2.2.1.1.1. Direct download

https://github.com/ilkeyi/Solutions/raw/refs/heads/main/_Learn/Download.Package/Windows.11.25H2/Microsoft.HEVCVideoExtension_8wekyb3d8bbwe.appxbundle

3.2.2.1.1.2. Open the website: <https://store.rg-adguard.net>

3.2.2.1.1.2.1. a). Select a URL (link). b). Select a channel (Retail). c). Enter keywords:

<https://www.microsoft.com/store/productId/9N4WGH0Z6VHQ>

3.2.2.1.1.2.2. Search results:

[Microsoft.HEVCVideoExtension_2.4.13.0.*.appxbundle](#)

3.2.2.1.1.2.3. After downloading, save it to the "Desktop" and rename it: Microsoft.HEVCVideoExtension_8wekyb3d8bbwe.appxbundle

3.2.2.1.2. License

3.2.2.1.2.1. Pre-saved licenses

Copy

{location}:\\YiSolutions_Learn\\Packaging.tutorial\\OS.11\\25H2\\Expand\\License\\15a6383d188a454ca98e15931ce48dc4_License1.xml to the desktop. If it is not available locally, download it online.

3.2.2.1.2.2. After downloading the file through the online download link, save it to the desktop

https://github.com/ilkeyi/Solutions/raw/refs/heads/main/_Learn/Download.Package/Windows.11.25H2/15a6383d188a454ca98e15931ce48dc4_License1.xml

3.2.3. After downloading through the above method, you will get the following 4 files:

- 3.2.3.1. Microsoft.SecHealthUI_8wekyb3d8bbwe.x64.appx
- 3.2.3.2. Microsoft.SecHealthUI_8wekyb3d8bbwe.arm64.appx
- 3.2.3.3. Microsoft.HEVCVideoExtension_8wekyb3d8bbwe.appxbundle
- 3.2.3.4. 15a6383d188a454ca98e15931ce48dc4_License1.xml

3.2.4. Use ISO editing tools to edit [26100.6584.250904-1728.ge_release_svc_prod1_amd64fre_InboxApps.iso](#) and add the prepared files to the [\[ISO\]:\packages](#) directory;

B. Language Pack: Extract

I. Language pack: Ready

Mount [26100.1.240331-1435.ge_release_amd64fre_CLIENT_LOF_PACKAGES_OEM.iso](#) or unzipped to any location;

II. Language pack: Scheme

1. Add

1.1. Language name: [Simplified Chinese - China](#), Region: [zh-CN](#), Scope of application: [Install.Wim](#), [Boot.Wim](#), [WinRE.Wim](#)

2. Delete

2.1. Language name: [English - United States](#), Region: [en-US](#), Scope of application: [Install.Wim](#), [Boot.Wim](#), [WinRE.Wim](#)

III. Execute the extract command

- [Auto](#) = automatically search all local disks, default;
- Customize the path, for example, specify the E drive: [\\$ISO = "E:\\"](#)
- Extract.ps1
 - [\Expand\Extract.ps1](#)
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/Extract.ps1

• Copy the code

C. Custom encapsulation

I. Custom encapsulation Install.wim

1. View Install.wim details

Before mounting, you should analyze the content structure of the Windows image. It usually contains multiple different versions (such as Home, Enterprise, Education, etc.). You can use the view command to display: image name, image description, image size, architecture, version, index number, etc. Then you can customize the required "index number" for mounting.

```
$ViewFile = "D:\OS_11\Sources\Install.wim"
```

```
Get-WindowsImage -ImagePath $ViewFile | Foreach-Object { Get-WindowsImage -ImagePath $ViewFile -Index $_.ImageIndex }
```

LOOP OPERATING AREA, START,

2. Specify the path to mount Install.wim

```
New-Item -Path "D:\OS_11_Custom\Install\Install\Mount" -ItemType directory
```

3. Start mounting Install.wim

Default index number: 1

```
Mount-WindowsImage -ImagePath "D:\OS_11\sources\install.wim" -Index "1" -Path "D:\OS_11_Custom\Install\Install\Mount"
```

- Verify Mount Status

After mounting, check the "Mounted Windows Image Information," including mount directory, image name, and status, by running the command:

```
Get-WindowsImage -Mounted
```

PROCESS FILES WITHIN THE INSTALL.WIM IMAGE, OPTIONALY, START,

3.1. Custom encapsulation WinRE.wim

WARNING:

- WinRE.wim is a file within the Install.wim image;
- When Install.wim has multiple index numbers, only process any WinRE.wim;
- Synchronize to all index numbers to reduce the size of Install.wim, learn "How to batch replace WinRE.wim in all index numbers in Install.wim".

3.1.1. View WinRE.wim details

Image name, image description, image size, architecture, version, index number, etc.

```
$ViewFile = "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery\WinRE.wim"
```

```
Get-WindowsImage -ImagePath $ViewFile | Foreach-Object { Get-WindowsImage -ImagePath $ViewFile -index  
$_.ImageIndex }
```

3.1.2. Specify the path to mount WinRE.wim

```
New-Item -Path "D:\OS_11_Custom\Install\WinRE\Mount" -ItemType directory
```

3.1.3. Start mounting WinRE.wim

Default index number: 1

```
Mount-WindowsImage -ImagePath "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery\WinRE.wim" -  
Index "1" -Path "D:\OS_11_Custom\Install\WinRE\Mount"
```

- Verify Mount Status

After mounting, check the "Mounted Windows Image Information," including mount directory, image name, and status, by running the command:

```
Get-WindowsImage -Mounted
```

3.1.4. Language pack: WinRE

- Automatically install language packs: Get "Component: All installed packages in the image" and match them. After matching the corresponding names, install the local corresponding language pack files.
- When adding languages, different schema versions must be corresponded, and if not, errors are reported during the addition process.

3.1.4.1. Language pack: add

- WinRE.Instl.lang.ps1

- \Expand\Install\WinRE\WinRE.Instl.lang.ps1

- https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/Install/WinRE/WinRE.Instl.lang.ps1

- Copy the code

```
$Mount = "D:\OS_11_Custom\Install\WinRE\Mount"
```

```
$Sources = "D:\OS_11_Custom\Install\WinRE\Language\Add\zh-CN"
```

```

3.1.4.2. Offline image language: change

3.1.4.2.1. Change default language, regional settings, and other international settings

Region: zh-CN

```
Dism /Image:"D:\OS_11_Custom\Install\WinRE\Mount" /Set-AllIntl:"zh-CN"
```

3.1.4.2.2. View available language settings

```
Dism /Image:"D:\OS_11_Custom\Install\WinRE\Mount" /Get-Intl
```

3.1.4.3. Components: All packages installed in the image

3.1.4.3.1. View

```
Get-WindowsPackage -Path "D:\OS_11_Custom\Install\WinRE\Mount" | Out-GridView
```

3.1.4.3.2. Export to csv

```
$SaveTo = "D:\OS_11_Custom\Install\WinRE\Report.Components.$(Get-Date -Format  
"yyyyMMddHHmmss").csv"
```

```
Get-WindowsPackage -Path "D:\OS_11_Custom\Install\WinRE\Mount" | Export-Csv -  
NoType -Path $SaveTo
```

```
Write-host $SaveTo -ForegroundColor Green
```

3.1.5. Cumulative updates

3.1.5.1. Add

Go to the download page: <https://www.catalog.update.microsoft.com/Search.aspx?q=KB5070186>, download and save to: D:\OS_11_Custom\Install\WinRE\Update, or download directly, selecting the appropriate download path based on your system architecture.

3.1.5.1.1. x64, default

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/4bbd25e0-ac80-41bc-bd38-1bdba0bb63d6/public/windows11.0-kb5070186-x64_71c4a1f083355193e464c0bd3e538dd34753f8dd.cab

- Install

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\WinRE\Mount" -PackagePath "D:\OS_11_Custom\Install\WinRE\Update\windows11.0-kb5070186-x64_71c4a1f083355193e464c0bd3e538dd34753f8dd.cab"
```

3.1.5.1.2. arm64

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/842afa37-e29b-435c-9c22-36f32e81e5c3/public/windows11.0-kb5070186-arm64_04864c55245d82fec095d6677bc26b4ed70cb1bf.cab

- Install

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\WinRE\Mount" -PackagePath "D:\OS_11_Custom\Install\WinRE\Update\windows11.0-kb5070186-arm64_04864c55245d82fec095d6677bc26b4ed70cb1bf.cab"
```

3.1.5.2. Solid update

It cannot be uninstalled after curing, which cleans the recovery image and resets the basis of any superseded components.

```
Dism /image:"D:\OS_11_Custom\Install\WinRE\Mount" /cleanup-image /StartComponentCleanup /ResetBase
```

3.1.5.2.1. Clean components after curing and updating

```
$Mount = "D:\OS_11_Custom\Install\WinRE\Mount"

Get-WindowsPackage -Path $Mount -ErrorAction SilentlyContinue | ForEach-Object {

    if ($_.PackageState -eq "Superseded") {

        Write-Host " $($_.PackageName)" -ForegroundColor Green

        Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null

    }

}
```

3.1.6. Drive

3.1.7. Save image: WinRE.wim

```
Save-WindowsImage -Path "D:\OS_11_Custom\Install\WinRE\Mount"
```

3.1.8. Unmount image: WinRE.wim

Close any applications that may be accessing files in the image, including File Explorer.

```
Dismount-WindowsImage -Path "D:\OS_11_Custom\Install\Mount\WinRE\Mount" -Discard
```

3.1.9. After rebuilding WinRE.wim, the file size can be reduced

- WinRE.Rebuild.ps1

- \Expand\Install\WinRE\WinRE.Rebuild.ps1

- https://github.com/ilkeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/25H2/Expand/Install/WinRE/WinRE.Rebuild.ps1

- Copy the code

```
$FileName = "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery\WinRE.wim"
```

```
Get-WindowsImage -ImagePath $Filename -ErrorAction SilentlyContinue | ForEach-Object {
```

```
    Write-Host " Image name: " -NoNewline; Write-Host "$($_.ImageName)" -ForegroundColor Yellow
```

```
    Write-Host " The index number: " -NoNewline; Write-Host "$($_.ImageIndex)" -ForegroundColor Yellow
```

```
    Write-Host "`n Under reconstruction ".PadRight(28) -NoNewline
```

```
    try{
```

```
        Export-WindowsImage -SourceImagePath $($filename) -SourceIndex $($_.ImageIndex) -DestinationImagePath $($filename).New" -CompressionType max | Out-Null
```

```
        Write-Host "Finish" -ForegroundColor Green
```

```
    } catch{
```

```
        Write-Host $_ -ForegroundColor Yellow
```

```
        Write-host $Failed -ForegroundColor Red
```

```
    }
```

```
    Write-Host "`n Rename: " -NoNewline -ForegroundColor Yellow
```

```
    if (Test-Path $($filename).New" -PathType Leaf) {
```

```
        Remove-Item -Path $filename
```

```
        Move-Item -Path $($filename).New" -Destination $filename
```

```
        Write-Host "Finish" -ForegroundColor Green
```

```
    } else {
```

```
        Write-host "Failed" -ForegroundColor Red
```

```
    }
```

3.1.10. Backup WinRE.wim

- WinRE.Backup.ps1

- \Expand\Install\WinRE\WinRE.Backup.ps1
- https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/Install/WinRE/WinRE.Backup.ps1

- Copy the code

```
$WimLibPath = "D:\OS_11_Custom\Install\Install\Update\Winlib"

$FileName = "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery\WinRE.wim"

New-Item -Path $WimLibPath -ItemType Directory

Copy-Item -Path $FileName -Destination $WimLibPath -Force
```

3.1.11. Replace WinRE.wim within the Install.wim image

- After each mount Install.wim "Replace WinRE.wim";
- Learn "Get all index numbers of Install.wim and replace the old WinRE.wim".

Process the files in the Install.wim image and end.

4. Language pack

- Automatically install language packs: Get "Component: All installed packages in the image" and match them. After matching the corresponding names, install the local corresponding language pack files.
- When adding languages, different schema versions must be corresponded, and if not, errors are reported during the addition process.

4.1. Language pack: add

- Install.Instl.lang.ps1

- \Expand\Install\Install.Instl.lang.ps1
- https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/Install/Install.Instl.lang.ps1

- Copy the code

```

Language_Install -Mount "D:\OS_11_Custom\Install\Install\Mount" -Sources
"D:\OS_11_Custom\Install\Install\Language\Add" -Lang "zh-CN"

```

4.2. Offline image language: change

- Starting Windows 11, the [default System UI Language](#) set by DISM is left unaltered on all editions except for Home edition. For [all commercial editions](#) the language chosen during the Out-of-Box Experience (OOBE) is set as the [System Preferred UI language](#) and Windows will be displayed in this language and for Home edition the language chosen at OOBE will continue to be the default System UI Language.
- As of Windows 10, version 2004, if an .appx-based Language Experience Pack (LXP) backed language is passed as an argument then the language will be set as the System Preferred UI language and its parent language will be set as the Default System UI language. In prior versions only .cab based language packs were supported.

4.2.1. Change default language, regional settings, and other international settings

Region: zh-CN

```
Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /Set-AllIntl:zh-CN
```

4.2.2. View available language settings

```
Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /Get-Intl
```

4.3. Components: All packages installed in the image

4.3.1. View

```
Get-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" | Out-GridView
```

4.3.2. Export to csv

```
$SaveTo = "D:\OS_11_Custom\Install\Install\Report.Components.$(Get-Date -Format "yyyyMMddHHmmss").csv"
```

```
Get-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" | Export-Csv -NoType -Path $SaveTo
```

```
Write-host $SaveTo -ForegroundColor Green
```

5. InBox Apps

5.1. Learn

5.1.1. [DISM App Package \(.appx or .appxbundle\) Servicing Command-Line Options](#)

Important:

DISM /add-provisionedappxpackage Starting in Windows 10 version 1803, when using this option, you can preinstall apps without pinning them to the Start menu /region. When preinstalling an app, you can choose to exclude the app from LayoutModification.xml so that the app will install successfully and not appear as a Start menu tile. If no region list is specified, the app will only be provisioned when it is pinned to the Start layout.

Again, you are warned that using the command line to add must add the parameter: /Region

5.2. InBox Apps: Pre-install the application

5.3. InBox Apps: Installed

```
$custom_array = @(); Get-AppXProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" | ForEach-Object
{ $custom_array += [PSCustomObject]@{ DisplayName = $_.DisplayName; PackageName = $_.PackageName; Version = $_.Version;
Architecture = $_.Architecture; ResourceId = $_.ResourceId; Regions = $_.Regions; } };
```

- After executing the above PS code first, you can select the following "[View](#)" or "[Export to CSV](#)".
- Check the installed InBox Apps and understand the region binding. Unbound regions will not appear in the application after executing OOBE.

5.3.1. View

```
$custom_array | Out-GridView
```

5.3.2. Export to Csv

```
$SaveTo = "D:\OS_11_Custom\Install\Install\Report.InBox.Apps.$(Get-Date -Format "yyyyMMddHHmmss").csv"
```

```
$custom_array | Export-Csv -NoType -Path $SaveTo
```

```
Write-host $SaveTo -ForegroundColor Green
```

5.4. Remove all installed pre-applications

- [Install.Inbox.apps.Clear.all.ps1](#)
 - [\Expand\Install\Install.Inbox.apps.Clear.all.ps1](#)

- https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/25H2/Expand/Install/Install.InBox.Apps.Clear.all.ps1

- Copy the code

```
Get-AppXProvisionedPackage -path "D:\OS_11_Custom\Install\Install\Mount" -ErrorAction SilentlyContinue | ForEach-Object
{
    Write-host "`n $($_.DisplayName)"; Write-Host " Deleting ".PadRight(22) -NoNewline

    try {
        Remove-AppxProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackageName $_.PackageName -ErrorAction SilentlyContinue | Out-Null

        Write-host "Finish" -ForegroundColor Green
    } catch {
        Write-host "Failed" -ForegroundColor Red
    }
}
```

5.5. Installing "Local Language Experience Packs (LXPs)" to offline images marks: installed languages

Before you learn about installed language tags, first understand the list of languages available in the ZuneMusic app: en-us, en-gb, as-in, az-latn-az, bs-latn-ba, bn-in, cs-cz, cy-gb, ar-sa, de-de, af-za, am-et, da-dk, el-gr, es-es, es-mx, ca-es, ca-es-valencia, eu-es, fi-fi, bg-bg, ga-ie, et-ee, gl-es, gu-in, gd-gb, fil-ph, fr-ca, fr-fr, hy-am, fa-ir, hu-hu, id-id, it-it, ja-jp, hr-hr, ka-ge, is-is, he-il, hi-in, kk-kz, lo-la, km-kh, lt-lt, kn-in, kok-in, ko-kr, mk-mk, lv-lv, ms-my, mi-nz, mr-in, mt-mt, ne-np, nl-nl, nb-no, ml-in, nn-no, lb-lu, or-in, ro-ro, sk-sk, ru-ru, pl-pl, quz-pe, pt-br, pt-pt, sq-al, ta-in, th-th, sv-se, pa-in, sr-cyrl-ba, sr-cyrl-rs, sr-latn-rs, ur-pk, ug-cn, tr-tr, uk-ua, tt-ru, zh-cn, vi-vn, uz-latn-uz, sl-si, zh-tw, te-in

View installed languages for offline images

```
Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /Get-Intl
```

View results Installed languages: en-US, zh-CN. When installing the ZuneMusic app, the installer will match "Installed Languages" and automatically filter the list of uninstalled languages. This is the language tag.

5.6. Offline image has language tag installed: How to add it

To mark the offline image: Language has been installed, there are two methods. The first is to install Microsoft-Windows-Client-Language-Pack_x64_zh-cn.cab, and the second is to install "Local Language Experience Pack (LXPs)". Microsoft official Windows 10 provides Local Language Experience Pack (LXPS) installation files, but Windows 11 no longer provides them. If you want to get them:

5.6.1. Download using the Windows Local Language Experience Packs (LXPs) Downloader

learn: <https://github.com/ilikeyi/LXPs>

After downloading, save to: D:\OS_11_Custom\Install\Install\Inbox.apps

File format: LanguageExperiencePack.zh-CN.Neutral.Appx

5.6.2. Manual download

| 5.6.2.1. | Region | Region | Products ID | Region | Products ID |
|----------------|---------------|-------------|--------------|--------|-------------|

Download Region: zh-CN, application ID: 9NRMNT6GMZ70, Store link:
<https://www.microsoft.com/store/productId/9NRMNT6GMZ70>

- 5.6.2.2. Open the website: <https://store.rg-adguard.net>
- 5.6.2.2.1. a). Select a URL (link). b). Select a channel (RP). c). Enter keywords:
<https://www.microsoft.com/store/productId/9NRMNT6GMZ70>
- 5.6.2.2.2. Search 26200 content in the web page, search results:
Microsoft.LanguageExperiencePackzh-CN_26200.*.neutral__8wekyb3d8bbwe.appx
- 5.6.2.2.3. After downloading, save it to the
D:\OS_11_Custom\Install\Install\Inbox.apps directory and rename it:
[LanguageExperiencePack.zh-cn.Neutral.Appx](#)

- 5.6.3. Execute the installation command to install the local language experience package (LXPs)

After understanding how to add zone tags, obtain [LanguageExperiencePack.zh-cn.Neutral.appx](#), execute the installation command:

```
Add-AppxProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\Inbox.apps\LanguageExperiencePack.zh-cn.Neutral.appx" -SkipLicense
```

- 5.6.4. Regional tag: New changes

The installed language of the offline image will become the default. For example, if the installed languages are en-US and zh-CN, when you reinstall or update the InBox Apps application, the installed language will be referenced for matching and the corresponding language pack will be automatically added. You can view the changes in the following ways.

- 5.6.4.1. InBox Apps: An installed application package

```
$custom_array = @(); Get-AppXProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" |  
ForEach-Object { $custom_array += [PSCustomObject]@{ DisplayName = $_.DisplayName;  
PackageName = $_.PackageName; Version = $_.Version; Architecture = $_.Architecture; ResourceId =  
$_.ResourceId; Regions = $_.Regions; }};
```

- After executing the above PS code first, you can select the following "View" or "Export to CSV".

- 5.6.4.1.1. View

```
$custom_array | Out-GridView
```

- 5.6.4.1.2. Export to Csv

```
$SaveTo = "D:\OS_11_Custom\Install\Install\Report.InBox.Apps.$(Get-Date -Format  
"yyyyMMddHHmmss").csv"
```

```
$custom_array | Export-Csv -NoType -Path $SaveTo
```

```
Write-host $SaveTo -ForegroundColor Green
```

- 5.6.4.2. View available language settings

```
Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /Get-Intl
```

- 5.7. InBox Apps: Install

- 5.7.1. Mount or decompress the InBox Apps installation file

Mount [26100.6584.250904-1728.ge_release_svc_prod1_amd64fre_InboxApps.iso](#) or extract to any location;

- 5.7.2. After executing the installation command, install InBox Apps to: Install.wim

- [Auto](#) = Automatically search all local disks, default;
- Custom path, e.g. specify F drive: [\\$ISO = "F:\packages"](#)
- Architecture: [x64](#)

- [Install.Inst.Inbox.apps.ps1](#)
 - [\Expand\Install\Install.Inst.Inbox.apps.ps1](#)
 - https://github.com/ilkeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/25H2/Expand/Install/Install.Inst.InBox.Apps.ps1

- Copy the code

```
$ISO = "Auto"

$Mount = "D:\OS_11_Custom\Install\Install\Mount"

$Arch = "x64"

try{

    Write-host `n Offline image version: " -NoNewline

    $Current_Edition_Version = (Get-WindowsEdition -Path $Mount).Edition

    Write-Host $Current_Edition_Version -ForegroundColor Green

} catch {

    Write-Host "Error" -ForegroundColor Red

    Write-Host " $($_) " -ForegroundColor Yellow

    return

}

5.8. Offline image has language tag installed: Remove

- After completing the installation of the InBox Apps application, the Region tag is no longer important and can be deleted or not deleted. Delete "Local Language Experience Package (LXPs), Simplified Chinese - China" and uniquely identify the Region tag: **zh-CN**, can be changed to other Region tag.

- Install.Clear.Flag.ps1
 - \Expand\Install\Install.Clear.Flag.ps1
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/25H2/Expand/Install/Install.Clear.Flag.ps1

- Copy the code

```
$Lang = "zh-CN"

Get-AppXProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" | Foreach-object {

if ($_.DisplayName -Like "*LanguageExperiencePack*$(($Lang)*"){

Write-host " $($_.DisplayName)"; Write-Host " Deleting ".PadRight(22) -NoNewline

try{

Remove-AppxProvisionedPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackageName $_.PackageName -
ErrorAction SilentlyContinue | Out-Null

Write-host "Finish" -ForegroundColor Green

} catch{

Write-host "Failed" -ForegroundColor Red

}

}

}

}
```

5.9. InBox Apps: optimization

After the app is installed, provisioning the Appx package should be optimized to reduce the app's disk usage by replacing identical files with hard links, only for offline images.

```
Optimize-AppXProvisionedPackages -Path "D:\OS_11_Custom\Install\Install\Mount"
```

6. Cumulative updates

- When upgrading different versions or older versions to the latest version, you need to add the "checkpoint update" first before adding the latest cumulative update;
- After adding the language pack, you can install the same cumulative update as the initial version to solve the known issue that the "Component: All packages installed in the image" status is not refreshed after installation;
- To stay up to date, it is recommended that you download the latest version.

6.1. Feature Enablement Package

- Before you add the latest cumulative update, you need to add the feature enablement package first, otherwise you cannot add the latest cumulative update. Go to the download page:
<https://www.catalog.update.microsoft.com/Search.aspx?q=KB5054156>, and save it to: D:\OS_11_Custom\Install\Install\Update, or download through direct connection, select download according to the architecture:

6.1.1. x64 eKB, default

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/67731ce0-1988-426a-afa3-044a032eb6c6/public/windows11.0-kb5054156-x64_9fd13360d2c5af23ec4f591b86f1c1db37aada37.msu

- Add to

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5054156-  
x64_9fd13360d2c5af23ec4f591b86f1c1db37aada37.msu"
```

6.1.2. Arm64 eKB

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/2e42e2b9-993c-4cc5-a8c5-6e20fc64b17e/public/windows11.0-kb5054156-arm64_e57cf6837a8b9877786ec3e7a366503a6072f5e5.msu

- Add to

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5054156-  
arm64_e57cf6837a8b9877786ec3e7a366503a6072f5e5.msu"
```

6.2. Initial release cumulative update

- Note: This option is provided to create the same version. If installing a different version, please skip downloading the cumulative updates required for the initial version.
- Cumulative update [KB5043080](#) can no longer be found at <https://www.catalog.update.microsoft.com/Search.aspx?q=KB5043080>. Download it directly and save it to: D:\OS_11_Custom\Install\Install\Update. Select the appropriate path based on your architecture:

6.2.1. x64, default

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/d8b7f92b-bd35-4b4c-96e5-46ce984b31e0/public/windows11.0-kb5043080-x64_953449672073f8fb99badb4cc6d5d7849b9c83e8.msu

- Add to

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5043080-  
x64_953449672073f8fb99badb4cc6d5d7849b9c83e8.msu"
```

6.2.2. Arm64

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/f263aa64-f367-42f0-9cad-328f342b93f7/public/windows11.0-kb5043080-arm64_df540a05f9b118e339c5520f4090bb5d450f090b.msu

- Add to

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5043080-  
arm64_df540a05f9b118e339c5520f4090bb5d450f090b.msu"
```

6.3. Other versions

Check "[Windows 11 version information](#)", for example, download cumulative update: kb5070311, Version: 26200.7309, go to the download page: <https://www.catalog.update.microsoft.com/Search.aspx?q=KB5070311>, download and save to: D:\OS_11_Custom\Install\Install\Update, or download through direct connection, select download according to the architecture:

6.3.1. x64, default

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/f441052e-a67d-4d6a-81e9-5acaddb88f58/public/windows11.0-kb5070311-x64_26ddb2f650e898decc8891401f22f0b506638572.msu

First, install [7-Zip](#) compression software. After downloading, select the file, [right-click](#), and choose: [7-Zip -> Open Archive](#). Locate the file starting with SSU-*x64.cab and drag it to D:\OS_11_Custom\Install\Install\Update

- Add to

Prioritize installing the servicing stack update (SSU) "SSU-26100.7295-x64.cab". This update cannot proceed if you do not prioritize installing the servicing stack update (SSU).

- Service Stack Update (SSU)

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\Update\SSU-26100.7295-x64.cab"
```

- Cumulative Updates

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5070311-  
x64_26ddb2f650e898decc8891401f22f0b506638572.msu"
```

6.3.2. Arm64

- Direct download

https://catalog.sf.dl.delivery.mp.microsoft.com/filestreamingservice/files/fa3b7b60-ced2-40d6-b1af-31c52f700eb5/public/windows11.0-kb5070311-arm64_514253aa0863bc2148fb73bd65611e844798a04f.msu

First, install [7-Zip](#) compression software. After downloading, select the file, [right-click](#), and choose: [7-Zip -> Open Archive](#). Locate the file starting with SSU-*arm64.cab and drag it to D:\OS_11_Custom\Install\Install\Update

- Add to

Prioritize installing the servicing stack update (SSU) "SSU-26100.7295-arm64.cab". This update cannot proceed if you do not prioritize installing the servicing stack update (SSU).

- Service Stack Update (SSU)

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\Update\SSU-26100.7295-arm64.cab"
```

- Cumulative Updates

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Install\Install\Mount" -PackagePath  
"D:\OS_11_Custom\Install\Install\Update\windows11.0-kb5070311-  
arm64_514253aa0863bc2148fb73bd65611e844798a04f.msu"
```

6.4. Solidify Updated

It cannot be uninstalled after curing, which cleans the recovery image and resets the basis of any superseded components.

```
Dism /Image:"D:\OS_11_Custom\Install\Install\Mount" /cleanup-image /StartComponentCleanup /ResetBase
```

6.4.1. Clean components after curing and updating

```
$Mount = "D:\OS_11_Custom\Install\Install\Mount"  
  
Get-WindowsPackage -Path $Mount -ErrorAction SilentlyContinue | ForEach-Object {  
  
    if ($.PackageState -eq "Superseded") {  
  
        Write-Host " $($_.PackageName)" -ForegroundColor Green  
  
        Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null  
  
    }  
  
}
```

7. Drive

8. Deployment engine: Add

- Learn "Deployment Engine", if added to ISO installation media, can skip adding to mounted.
- After adding the deployment engine, continue at the current location.

9. Health

Before saving, check whether it is damaged. If the health status is abnormal, stop saving.

```
Repair-WindowsImage -Path "D:\OS_11_Custom\Install\Install\Mount" -ScanHealth
```

10. Replace WinRE.wim

WinRE.wim in all index numbers in Install.wim has been replaced in batches. Please skip this step.

```
$WinRE = "D:\OS_11_Custom\Install\Install\Update\Winlib\WinRE.wim"  
  
$CopyTo = "D:\OS_11_Custom\Install\Install\Mount\Windows\System32\Recovery"  
  
Copy-Item -Path $WinRE -Destination $CopyTo -Force
```

11. Save image: Install.wim

```
Save-WindowsImage -Path "D:\OS_11_Custom\Install\Install\Mount"
```

12. Unmount image: Install.wim

Close any applications that may be accessing files in the image, including File Explorer.

```
Dismount-WindowsImage -Path "D:\OS_11_Custom\Install\Install\Mount" -Discard
```

LOOP OPERATING AREA, END.

13. How to batch replace WinRE.wim in all index numbers in Install.wim

13.1. Obtain WimLib

After going to the official website of <https://wimlib.net>, select a different version: arm64, x64, x86, and extract it to: D:\Wimlib after downloading

13.2. How to extract and update WinRE.wim in Install.wim

13.2.1. Extract the WinRE.wim file Install.wim from Install.wim

- Install.WinRE.Extract.ps1

- \Expand\Install\Install.WinRE.Extract.ps1

- https://github.com/ilkeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/25H2/Expand/Install/Install.WinRE.Extract.ps1

- Copy the code

```
$Arguments = @(
```

```
"extract",
```

```
"D:\OS_11\sources\install.wim", "1",
```

```
"\Windows\System32\Recovery\Winre.wim",
```

```
--dest-dir=""D:\OS_11_Custom\Install\Install\Update\Winlib"""
```

```
)
```

```
New-Item -Path "D:\OS_11_Custom\Install\Install\Update\Winlib" -ItemType Directory
```

```
Start-Process -FilePath "d:\wimlib\wimlib-image.exe" -ArgumentList $Arguments -wait -nonewwindow
```

13.2.2. Get all index numbers of Install.wim and replace the old WinRE.wim

- Install.WinRE.Replace.wim.ps1

- \Expand\Install\Install.WinRE.Replace.wim.ps1

- https://github.com/ilkeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/25H2/Expand/Install/Install.WinRE.Replace.wim.ps1

- Copy the code

```

Get-WindowsImage -ImagePath "D:\OS_11\sources\install.wim" -ErrorAction SilentlyContinue | ForEach-Object {

    Write-Host " Image name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow

    Write-Host " The index number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow

    Write-Host "`n Replacement"

    $Arguments = @(
        "update",
        "D:\OS_11\sources\install.wim", $_.ImageIndex,
        "--command=""add 'D:\OS_11_Custom\Install\Install\Update\Winlib\WinRE.wim'
        '\Windows\System32\Recovery\WinRe.wim"""
    )

    Start-Process -FilePath "d:\wimlib\wimlib-imagex.exe" -ArgumentList $Arguments -wait -nonewwindow

    Write-Host " Finish`n" -ForegroundColor Green

}

```

14. Rebuilding Install.wim reduces file size

- [Install.Rebuild.wim.ps1](#)

- [\Expand\Install\Install.Rebuild.wim.ps1](#)

- https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/Install/Install.Rebuild.wim.ps1

- Copy the code

```
$InstallWim = "D:\OS_11\sources\install.wim"
```

```
Get-WindowsImage -ImagePath $InstallWim -ErrorAction SilentlyContinue | ForEach-Object {
```

```
    Write-Host " Image name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow
```

```
    Write-Host " The index number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow
```

```
    Write-Host "`n Under reconstruction".PadRight(28) -NoNewline
```

```
    Export-WindowsImage -SourceImagePath $InstallWim -SourceIndex $_.ImageIndex -DestinationImagePath "$($InstallWim).New" -
    CompressionType max | Out-Null
```

```
    Write-Host "Finish`n" -ForegroundColor Green
```

```
}
```

```
if (Test-Path "$($InstallWim).New" -PathType Leaf) {
```

```
    Remove-Item -Path $InstallWim
```

```
    Move-Item -Path "$($InstallWim).New" -Destination $InstallWim
```

```
    Write-Host "Finish" -ForegroundColor Green
```

```
} else {
```

```
    Write-host "Failed" -ForegroundColor Red
```

```
}
```

15. Split, merge, compress, and convert

Solid compression is in ESD file format. If the file exceeds 4GB, it cannot be split and cannot be copied to a FAT32 disk. This is a disadvantage.

Using FAT32 format to store Windows installation boot is the best solution. If the Install.wim file exceeds 4GB and cannot be copied to a FAT32 disk, you need to split the Install.wim file and copy it to a FAT32 disk after the file size is less than 4GB.

It is particularly important to learn how to split and merge, solid compression and conversion.

15.1. Splitting and merging

15.1.1. Splitting

After splitting Install.wim into 4GB file sizes and getting new file names Install.*.swm, delete the old Install.wim.

- [Install.Split.ps1](#)

- [\Expand\Install\Install.Split.ps1](#)
- https://github.com/ilkeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/Install/Install.Split.ps1

- Copy the code

```
Write-host "Split Install.wim into Install.*.swm";  
  
Write-host "Splitting" -NoNewline;  
  
Split-WindowsImage -ImagePath "D:\OS_11\sources\install.wim" -SplitImagePath "D:\OS_11\sources\install.swm"  
-FileSize "4096" -CheckIntegrity -ErrorAction SilentlyContinue | Out-Null  
  
Write-Host "Split Complete`n" -ForegroundColor Green  
  
Write-host "`nVerify completion and delete old files"  
  
if (Test-Path -Path "D:\OS_11\sources\install.swm" -PathType leaf){  
  
    Remove-Item -Path "D:\OS_11\sources\install.wim"  
  
    Write-Host "Done" -ForegroundColor Green  
  
} else {  
  
    Write-Host "Failed" -ForegroundColor Red  
  
}
```

15.1.2. Merge

After merging all Install.*.swm into Install.wim, delete the old Install.*.swm.

- [Install.Merging.ps1](#)

- [\Expand\Install\Install.Merging.ps1](#)
- https://github.com/ilkeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/Install/Install.Merging.ps1

- Copy the code

```
Write-host "Merge all Install.*.swm files into Install.wim";
```

```

Get-WindowsImage -ImagePath "D:\OS_11\Sources\install.swm" -ErrorAction SilentlyContinue | ForEach-Object {

    Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;

    Write-Host "Index Number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow;

    Write-Host "Exporting".PadRight(28) -NoNewline

    dism /export-image /SourceImageFile:"D:\OS_11\Sources\install.swm"
    /swmfile:"D:\OS_11\sources\install*.swm" /SourceIndex:"$($_.ImageIndex)"
    /DestinationImageFile:"D:\OS_11\Sources\install.wim" /Compress:"Max" /CheckIntegrity

    Write-Host "Export Complete`n" -ForegroundColor Green

}

Write-host "`nVerify completion and delete old files"

if (Test-Path -Path "D:\OS_11\Sources\install.wim" -PathType leaf){

    Get-ChildItem -Path "D:\OS_11\sources" -Recurse -include "*.swm" | ForEach-Object {

        Write-Host "Delete: $($_.fullname)" -ForegroundColor Green

        Remove-Item -Path $_.fullname

    }

    Write-Host "Done" -ForegroundColor Green

} else {

    Write-Host "Failed" -ForegroundColor Green

}

```

15.2. Solid compressed ESD format and WIM format conversion

15.2.1. Solid compression

After solid compression, you can edit version information and application files, etc.; you cannot mount images, etc. After obtaining the new file install.esd, delete the old install.wim.

- [Install.Compress.ps1](#)
 - [\Expand\Install\Install.Compress.ps1](#)
 - https://github.com/ikeyil/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/25H2/Expand/Install/Install.Compress.ps1
- Copy the code

```

Write-host "Solid compressed Install.wim";

Get-WindowsImage -ImagePath "D:\OS_11\Sources\install.wim" -ErrorAction SilentlyContinue | ForEach-Object {

    Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;

    Write-Host "Index Number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow;

    Write-Host "Compressing".PadRight(28) -NoNewline

    dism /export-image /SourceImageFile:"D:\OS_11\Sources\install.wim" /SourceIndex:"$($_.ImageIndex)"
    /DestinationImageFile:"D:\OS_11\Sources\install.esd" /Compress:recovery /CheckIntegrity

```

```

        Write-Host "Compression completed`n" -ForegroundColor Green

    }

    Write-host "`nVerify completion and delete old files"

    if (Test-Path -Path "D:\OS_11\Sources\install.esd" -PathType leaf) {

        Remove-Item -Path "D:\OS_11\Sources\install.wim"

        Write-Host "Done" -ForegroundColor Green

    } else {

        Write-Host "Failed" -ForegroundColor Green

    }

```

15.2.2. Convert compressed files to WIM file format

- Install.Convert.ps1

- \Expand\Install\Install.Convert.ps1
- https://github.com/ilkeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/Install/Install.Convert.ps1

- Copy the code

```
Write-host "Convert ESD to WIM";
```

```
Get-WindowsImage -ImagePath "D:\OS_11\Sources\install.esd" -ErrorAction SilentlyContinue | ForEach-Object {
```

```
    Write-Host "Image Name: " -NoNewline; Write-Host $_.ImageName -ForegroundColor Yellow;
```

```
    Write-Host "Index Number: " -NoNewline; Write-Host $_.ImageIndex -ForegroundColor Yellow;
```

```
    Write-Host "Exporting".PadRight(28) -NoNewline
```

```
try {
```

```
    Export-WindowsImage -SourceImagePath "D:\OS_11\Sources\install.esd" -SourceIndex $_.ImageIndex -
    DestinationImagePath "D:\OS_11\Sources\install.wim" -CompressionType "Max" -CheckIntegrity -ErrorAction
    SilentlyContinue | Out-Null
```

```
    Write-Host "Done`n" -ForegroundColor Green
```

```
} catch {
```

```
    Write-Host $_ -ForegroundColor Yellow
```

```
    Write-host "Failed`n" -ForegroundColor Red
```

```
}
```

```
}
```

```
    Write-host "`nVerify completion and delete old files"
```

```
    if (Test-Path -Path "D:\OS_11\Sources\install.wim" -PathType leaf) {
```

```
        Remove-Item -Path "D:\OS_11\Sources\install.esd"
```

```
        Write-Host "Done" -ForegroundColor Green
```

```

} else {
    Write-Host "Failed" -ForegroundColor Green
}

```

II. Custom encapsulation boot.wim

1. View Boot.wim details

Image name, image description, image size, architecture, version, index number, etc.

```
$ViewFile = "D:\OS_11\Sources\Boot.wim"
```

```
Get-WindowsImage -ImagePath $ViewFile | Foreach-Object { Get-WindowsImage -ImagePath $ViewFile -index $_.ImageIndex }
```

2. Specify the path to mount Boot.wim

```
New-Item -Path "D:\OS_11_Custom\Boot\Boot\Mount" -ItemType directory
```

3. Start mounting Boot.wim

Default index number: 2

```
Mount-WindowsImage -ImagePath "D:\OS_11\sources\boot.wim" -Index "2" -Path "D:\OS_11_Custom\Boot\Boot\Mount"
```

- Verify Mount Status

After mounting, check the "Mounted Windows Image Information," including mount directory, image name, and status, by running the command:

```
Get-WindowsImage -Mounted
```

4. Language pack: Boot

- Automatically install language packs: Get "Component: All installed packages in the image" and match them. After matching the corresponding names, install the local corresponding language pack files.
- When adding languages, different schema versions must be corresponded, and if not, errors are reported during the addition process.

4.1. Language pack: Add

- Boot.Instl.lang.ps1
 - \Expand\Boot\Boot.Instl.lang.ps1
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/25H2/Expand/Boot/Boot.Instl.lang.ps1

- Copy the code

```
$Mount = "D:\OS_11_Custom\Boot\Boot\Mount"
```

```
$Sources = "D:\OS_11_Custom\Boot\Boot\Language\Add\zh-CN"
```

```
$Initl_install_Language_Component = @()
```

```
Get-WindowsPackage -Path $Mount | ForEach-Object {
```

```

$Initl_install_Language_Component += $_.PackageName

}

Add-WindowsPackage -Path $Mount -PackagePath "$($Sources)\WinPE-FontSupport-zh-CN.cab"

$Language = @(
    @{ Match = "*WinPE-LanguagePack-Package*"; File = "lp.cab"; }

    @{ Match = "*WinPE*Setup*Client*Package*"; File = "WINPE-SETUP-CLIENT_zh-CN.CAB"; }

    @{ Match = "*WinPE*Setup*Package*"; File = "WinPE-Setup_zh-CN.cab"; }

    @{ Match = "*ATBroker*"; File = "winpe-atbroker_zh-CN.cab"; }

    @{ Match = "*AudioCore*"; File = "winpe-audiocore_zh-CN.cab"; }

    @{ Match = "*AudioDrivers*"; File = "winpe-audiodrivers_zh-CN.cab"; }

    @{ Match = "*EnhancedStorage*"; File = "winpe-enhancedstorage_zh-CN.cab"; }

    @{ Match = "*Narrator*"; File = "winpe-narrator_zh-CN.cab"; }

    @{ Match = "*scripting*"; File = "winpe-scripting_zh-CN.cab"; }

    @{ Match = "*SecureStartup*"; File = "winpe-securestartup_zh-CN.cab"; }

    @{ Match = "*Speech-TTS*"; File = "winpe-speech-tts_zh-CN.cab"; }

    @{ Match = "*srh*"; File = "winpe-srh_zh-CN.cab"; }

    @{ Match = "*srt*"; File = "winpe-srt_zh-CN.cab"; }

    @{ Match = "*wds-tools*"; File = "winpe-wds-tools_zh-CN.cab"; }

    @{ Match = "*WinPE-WMI-Package*"; File = "winpe-wmi_zh-CN.cab"; }

)

ForEach ($Rule in $Language) {

    Write-host "`n Rule name: $($Rule.Match)" -ForegroundColor Yellow; Write-host " $($-' * 80)"

    ForEach ($Component in $Initl_install_Language_Component) {

        if ($Component -like "*$($Rule.Match)*") {

            Write-host " Component name: " -NoNewline; Write-host $Component -ForegroundColor Green

            Write-host " Language pack file: " -NoNewline; Write-host "$($Sources)\$($Rule.File)" -ForegroundColor Green

            Write-Host " Installing ".PadRight(22) -NoNewline

            try {

                Add-WindowsPackage -Path $Mount -PackagePath "$($Sources)\$($Rule.File)" | Out-Null

                Write-host "Finish" -ForegroundColor Green

            } catch {

                Write-host "Failed" -ForegroundColor Red

                Write-host " ${$_}" -ForegroundColor Red

            }

        }

    }

}

```

```
        break  
  
    }  
  
}  
  
}
```

4.2. Offline image language: change

4.2.1. Change default language, regional settings, and other international settings

Region: zh-CN

```
Dism /Image:"D:\OS_11_Custom\Boot\Boot\Mount" /Set-AllIntl:"zh-CN"
```

4.2.2. View available language settings

```
Dism /Image:"D:\OS_11_Custom\Boot\Boot\Mount" /Get-Intl
```

4.3. Components: All packages installed in the image

4.3.1. View

```
Get-WindowsPackage -Path "D:\OS_11_Custom\Boot\Boot\Mount" | Out-GridView
```

4.3.2. Export to csv

```
$SaveTo = "D:\OS_11_Custom\Boot\Report.Components.$(Get-Date -Format "yyyyMMddHHmmss").csv"
```

```
Get-WindowsPackage -Path "D:\OS_11_Custom\Boot\Boot\Mount" | Export-Csv -NoType -Path $SaveTo
```

```
Write-host $SaveTo -ForegroundColor Green
```

4.4. Language packs: sync to ISO installer

```
Copy-Item -Path "D:\OS_11_Custom\Boot\Boot\Mount\sources\zh-CN" -Destination "D:\OS_11\sources\zh-CN" -Recurse -Force
```

4.5. Regenerate Lang.ini

After regeneration, you can adjust the "Installation Interface", the order when selecting "Language", open lang.ini, the default preferred value = 3, non-default value = 2.

4.5.1. Regenerate the mounted directory lang.ini

Regenerated Lang.ini file location: D:\OS_11_Custom\Boot\Boot\Mount\Sources\lang.ini

```
Dism /Image:"D:\OS_11_Custom\Boot\Boot\Mount" /gen-langini /distribution:"D:\OS_11_Custom\Boot\Boot\Mount"
```

4.5.2. After regenerating lang.ini, sync to the installer

Regenerated Lang.ini file location: D:\OS_11\Sources\lang.ini

```
Dism /Image:"D:\OS_11_Custom\Boot\Boot\Mount" /gen-langini /distribution:"D:\OS_11"
```

5. Cumulative updates

To prepare the cumulative updates file available, change the example file name: KB_Boot.cab

5.1. Add

```
Add-WindowsPackage -Path "D:\OS_11_Custom\Boot\Boot\Mount" -PackagePath  
"D:\OS_11_Custom\Boot\Boot\Update\KB_Boot.cab"
```

5.2. Delete

```
Remove-WindowsPackage -Path "D:\OS_11_Custom\Boot\Boot\Mount" -PackagePath  
"D:\OS_11_Custom\Boot\Boot\Update\KB_Boot.cab"
```

5.3. Solid update

It cannot be uninstalled after curing, which cleans the recovery image and resets the basis of any superseded components.

```
Dism /image:"D:\OS_11_Custom\Boot\Boot\Mount" /cleanup-image /StartComponentCleanup /ResetBase
```

5.3.1. Clean components after curing and updating

```
$Mount = "D:\OS_11_Custom\Boot\Boot\Mount"  
  
Get-WindowsPackage -Path $Mount -ErrorAction SilentlyContinue | ForEach-Object {  
  
    if ($_.PackageState -eq "Superseded") {  
  
        Write-Host " $($_.PackageName)" -ForegroundColor Green  
  
        Remove-WindowsPackage -Path $Mount -PackageName $_.PackageName | Out-Null  
  
    }  
  
}
```

6. Drive

7. Other

7.1. Bypass TPM check during installation

- Boot.Bypass.TPM.ps1
 - \Expand\Boot\Boot.Bypass.TPM.ps1
 - https://github.com/ilikeyi/solutions/blob/main/_Learn/Packaging/tutorial/OS.11/25H2/Expand/Boot/Boot.Bypass.TPM.ps1

- Copy the code

```
$RegSystem = "D:\OS_11_Custom\Boot\Boot\Mount\Windows\System32\Config\SYSTEM"
```

```
$RandomGuid = [guid]::NewGuid()
```

```
Write-Host " HKLM:\$($RandomGuid)"
```

```
New-PSDrive -PSProvider Registry -Name OtherTasksTPM -Root HKLM -ErrorAction SilentlyContinue | Out-Null
```

```

Start-Process reg -ArgumentList "Load ""HKLM\$\($RandomGuid)"" "$($RegSystem)"" -Wait -WindowStyle Hidden -ErrorAction SilentlyContinue

New-Item "HKLM:\$\($RandomGuid)\Setup\LabConfig" -force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\$\($RandomGuid)\Setup\LabConfig" -Name "BypassCPUCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\$\($RandomGuid)\Setup\LabConfig" -Name "BypassStorageCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\$\($RandomGuid)\Setup\LabConfig" -Name "BypassRAMCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

New-ItemProperty -LiteralPath "HKLM:\$\($RandomGuid)\Setup\LabConfig" -Name "BypassSecureBootCheck" -Value 1 -PropertyType DWord -Force -ea SilentlyContinue | Out-Null

[gc]::collect()

Start-Process reg -ArgumentList "unload ""HKLM\$\($RandomGuid)"" -Wait -WindowStyle Hidden -ErrorAction SilentlyContinue

Remove-PSDrive -Name OtherTasksTPM

```

8. Save image: Boot.wim

```
Save-WindowsImage -Path "D:\OS_11_Custom\Boot\Boot\Mount"
```

9. Unmount image: Boot.wim

Close any applications that may be accessing files in the image, including File Explorer.

```
Dismount-WindowsImage -Path "D:\OS_11_Custom\Boot\Boot\Mount" -Discard
```

III. Deployment engine

- Learn about "Automatically Adding Languages Installed in Windows Systems", learn: <https://github.com/ilkeyi/Multilingual>, how to download:
 - After entering the website, click "Code", "Download Compressed Package", and after the download is completed, you will get the [main.zip](#) compressed package file.
 - Go to the <https://github.com/ilkeyi/Multilingual/releases> download page, select the available version: [1.1.1.1](#), select the download source code format: zip, and get the [Multilingual-1.1.1.1.zip](#) compressed package file after the download is completed;
 - Unzip the downloaded [main.zip](#) or [Multilingual-1.1.1.1.zip](#) to: [D:\Multilingual-1.1.1.1](#), and rename: [D:\Multilingual](#)
 - Learn "Unattended Windows Setup Reference", Intervene in the installation process by leaving it unattended.

1. Add method

1.1. Add to ISO installation media

1.1.1. Unattended

1.1.1.1. Add to: [\[ISO\]:\Autounattend.xml](#)

Autounattend.xml interferes with the WinPE installer when booting an ISO installation.

Copy D:\Multilingual\Learn\Unattend\Mul.Unattend.xml to D:\OS_11\Autounattend.xml

```
Copy-Item "D:\Multilingual\Learn\Unattend\Mul.Unattend.xml" -Destination "D:\OS_11\Autounattend.xml"  
-Force
```

1.1.1.2. Add to: [ISO]:\Sources\Unattend.xml

When mounting or unpacking an ISO, after running the [ISO]:\Setup.exe installer,
[ISO]:\Sources\Unattend.xml will intervene in the installation process.

Copy D:\Multilingual\Learn\Unattend\Mul.Unattend.xml to D:\OS_11\Sources\Unattend.xml

```
Copy-Item "D:\Multilingual\Learn\Unattend\Mul.Unattend.xml" -Destination  
"D:\OS_11\Sources\Unattend.xml" -Force
```

1.1.1.3. Add to: [ISO]:\sources\\$OEM\$\\$\\$Panther\unattend.xml

Copy it to the system disk during the installation process, copy to: {system
disk}:\Windows\Panther\unattend.xml

1.1.1.3.1. Create \$OEM\$ path

```
New-Item -Path "D:\OS_11\sources`$OEM$\$\$Panther" -ItemType Directory
```

1.1.1.3.2. Copy

Copy D:\Multilingual\Learn\Unattend\Mul.Unattend.xml to
D:\OS_11\Sources\\$OEM\$\Panther\Unattend.xml

```
Copy-Item "D:\Multilingual\Learn\Unattend\Mul.Unattend.xml" -Destination  
"D:\OS_11\sources`$OEM$\$\$Panther\Unattend.xml" -Force
```

1.1.2. Deployment engine: add

Add "Automatically add installed languages for Windows systems" to D:\OS_11\sources\\$OEM\$\\$1\Yi\Engine in the
directory.

1.1.2.1. Deployment Engine: Copy

Copy D:\Multilingual\Engine to D:\OS_11\Sources\\$OEM\$\\$1\Yi\Engine

```
Copy-Item "D:\Multilingual\Engine" -Destination "D:\OS_11\sources`$OEM$\`$1\Yi\Engine" -Recurse -  
Force
```

1.1.2.2. Deployment engine: custom deployment tags

```
$Flag = @(
```

```
"Is_Mark_Sync" # Allow global search and synchronization of deployment tags
```

```
# Prerequisite deployment
```

```
# "Auto_Update" # Allow automatic updates
```

```
# "Use_UTF8" # Beta: Global language support using Unicode UTF-8
```

```

"Disable_Network_Location_Wizard" # Network Location Wizard

"Disable_Cleanup_Appx_Tasks" # Appx Cleanup and maintenance tasks

"Disable_Cleanup_On_Demand_Language" # Prevent cleanup of unused on-demand feature language
packs

"Disable_Cleanup_Unused_Language" # Prevent cleaning of unused language packs

"Prerequisites_Reboot" # Restart your computer

# Complete first deployment

# "Popup_Engine" # Allow the deployment engine main interface to pop up for the first time

# "Allow_First_Pre_Experience" # Allow first preview, as planned

"Reset_Execution_Policy" # Restore PowerShell execution policy: Restricted

"Clear_Solutions" # Delete the entire solution

"Clear_Engine" # Delete the deployment engine and keep the others

# "First_Experience_Reboot" # Restart your computer

)

ForEach ($item in $Flag) {

    Write-host " $($item)" -ForegroundColor Green

    New-Item -Path "D:\OS_11\sources\$OEM\$`$1\Yi\Engine\Deploy\Allow" -ItemType Directory -
    ErrorAction SilentlyContinue | Out-Null

    Out-File -FilePath "D:\OS_11\sources\$OEM\$`$1\Yi\Engine\Deploy\Allow\$(item)" -Encoding utf8 -
    ErrorAction SilentlyContinue

}

```

1.2. Add to mounted

Through "Custom encapsulation Install.wim", execute "Start mounting Install.wim" and mount to:
D:\OS_11_Custom\Install\Install\Mount

1.2.1. Unattended

```

Copy D:\Multilingual\_Learn\Unattend\Mul.Unattend.xml to
D:\OS_11_Custom\Install\Install\Mount\Panther\Unattend.xml

Copy-Item "D:\Multilingual\_Learn\Unattend\Mul.Unattend.xml" -Destination
"D:\OS_11_Custom\Install\Install\Mount\Panther" -Force

```

1.2.2. Deployment engine: add

Add "Automatically add languages installed on Windows systems" to the
D:\OS_11_Custom\Install\Install\Mount\Yi\Engine directory.

1.2.2.1. Deployment Engine: Copy

Copy D:\Multilingual\Engine to D:\OS_11_Custom\Install\Install\Mount\Yi\Engine

```
Copy-Item "D:\Multilingual\Engine" -Destination "D:\OS_11_Custom\Install\Install\Mount\Yi\Engine" -  
Recurse -Force
```

1.2.2.2. Deployment engine: custom deployment tags

```
$Flag = @(  
  
    "Is_Mark_Sync" # Allow global search and synchronization of deployment tags  
  
    # Prerequisite deployment  
  
    # "Auto_Update" # Allow automatic updates  
  
    # "Use_UTF8" # Beta: Global language support using Unicode UTF-8  
  
    "Disable_Network_Location_Wizard" # Network Location Wizard  
  
    "Disable_Cleanup_Appx_Tasks" # Appx Cleanup and maintenance tasks  
  
    "Disable_Cleanup_On_Demand_Language" # Prevent cleanup of unused on-demand feature language  
    packs  
  
    "Disable_Cleanup_Unused_Language" # Prevent cleaning of unused language packs  
  
    "Prerequisites_Reboot" # Restart your computer  
  
    # Complete first deployment  
  
    # "Popup_Engine" # Allow the deployment engine main interface to pop up for the first time  
  
    # "Allow_First_Pre_Experience" # Allow first preview, as planned  
  
    "Reset_Execution_Policy" # Restore PowerShell execution policy: Restricted  
  
    "Clear_Solutions" # Delete the entire solution  
  
    "Clear_Engine" # Delete the deployment engine and keep the others  
  
    # "First_Experience_Reboot" # Restart your computer  
  
)  
  
ForEach ($item in $Flag) {  
  
    Write-host " $($item)" -ForegroundColor Green  
  
    New-Item -Path "D:\OS_11\sources\$OEM$\$1\Yi\Engine\Deploy\Allow" -ItemType Directory -  
    ErrorAction SilentlyContinue | Out-Null  
  
    Out-File -FilePath "D:\OS_11\sources\$OEM$\$1\Yi\Engine\Deploy\Allow\$(item)" -Encoding utf8 -  
    ErrorAction SilentlyContinue  
  
}
```

2. Deployment Engine: Advanced

2.1. Deployment engine: adding process

After copying the deployment engine, you can add deployment tags to intervene in the installation process.

2.2. Unattended solution

When the customization is unattended, please modify it simultaneously if the following files exist:

- D:\OS_11\Autounattend.xml
- D:\OS_11\Sources\Unattend.xml
- D:\OS_11\sources\\$OEM\$\\$\\$Panther\unattend.xml
- D:\OS_11_Custom\Install\Install\Mount\Panther\Unattend.xml

2.2.1. Multilingual or monolingual

In multi-language and monolingual, you can switch between each other. When replacing, please replace all the same ones in the file.

2.2.1.1. Multi-language

```
<UILanguage>%OSDUILanguage%</UILanguage>
<InputLocale>%OSDInputLocale%</InputLocale>
<SystemLocale>%OSDSystemLocale%</SystemLocale>
<UILanguage>%OSDUILanguage%</UILanguage>
<UILanguageFallback>%OSDUILanguageFallback%</UILanguageFallback>
<UserLocale>%OSDUserLocale%</UserLocale>
```

2.2.1.2. Monolingual

A single language needs to specify a Region tag, for example, specify a Region tag: zh-CN

```
<UILanguage>zh-CN</UILanguage>
<InputLocale>zh-CN</InputLocale>
<SystemLocale>zh-CN</SystemLocale>
<UILanguage>zh-CN</UILanguage>
<UILanguageFallback>zh-CN</UILanguageFallback>
<UserLocale>zh-CN</UserLocale>
```

2.2.2. User plan

By default, the self-created user **Administrator** is used and logged in automatically. It can be switched by modifying the following configuration: self-created or customized user.

2.2.2.1. Self-created user Administrator

By default, the self-created user: **Administrator** is used and logged in automatically, inserted between <OOBE> and </OOBE>.

```
<UserAccounts>
<LocalAccounts>
<LocalAccount wcm:action="add">
<Password>
```

```

<Value></Value>

<PlainText>true</PlainText>

</Password>

<Description>Administrator</Description>

<DisplayName>Administrator</DisplayName>

<Group>Administrators</Group>

<Name>Administrator</Name>

</LocalAccount>

</LocalAccounts>

</UserAccounts>

<AutoLogon>

<Password>

<Value></Value>

<PlainText>true</PlainText>

</Password>

<Enabled>true</Enabled>

<Username>Administrator</Username>

</AutoLogon>

```

2.2.2.2. Custom user

After setting up a custom user and installing the system, in OOBE, you can choose settings such as local and online users.

2.2.2.2.1. Delete

Username: Removed from start <UserAccounts> to </UserAccounts>
 Autologin: Remove from start <AutoLogon> to </AutoLogon>

2.2.2.2.2. Replace

From the beginning <OOBE> to </OOBE>

```

<OOBE>

<ProtectYourPC>3</ProtectYourPC>

<HideEULAPage>true</HideEULAPage>

<HideWirelessSetupInOOBE>true</HideWirelessSetupInOOBE>

</OOBE>

```

I. Generate ISO

1. Download OScdimg

Select the Oscdimg version according to the architecture, and save it to: D:\ after downloading. To save in other paths, please enter the absolute path of OScdimg.exe;

1.1. x64

https://github.com/ilkeyi/Solutions/raw/refs/heads/main/_Encapsulation/Modules/AIO/Oscdimg/amd64/oscdimg.exe

1.2. x86

https://github.com/ilkeyi/Solutions/raw/refs/heads/main/_Encapsulation/Modules/AIO/Oscdimg/x86/oscdimg.exe

1.3. arm64

https://github.com/ilkeyi/Solutions/raw/refs/heads/main/_Encapsulation/Modules/AIO/Oscdimg/arm64/oscdimg.exe

2. Use the oscdimg command line to generate an ISO file and save it to: D:\OS_11.iso

- ISO.ps1

- \Expand\ISO.ps1
- https://github.com/ilkeyi/solutions/blob/main/_Learn/Packaging.tutorial/OS.11/25H2/Expand/ISO.ps1

- Copy the code

```
$Oscdimg = "D:\Oscdimg.exe"

$ISO = "D:\OS_11"

$Volume = "OS_11"

$SaveTo = "D:\OS_11.iso"

$Arguments = @("-m", "-o", "-u2", "-udfver102", "-l""$($Volume)""", "-"
bootdata:2#p0,e,b""$($ISO)\boot\etfsboot.com""#pEF,e,b""$($ISO)\efi\microsoft\boot\efisys.bin""", $ISO, $SaveTo)

Start-Process -FilePath $Oscdimg -ArgumentList $Arguments -wait -nonewwindow
```

II. Bypass TPM installation check

1. Learn about: <https://github.com/AveYo/MediaCreationTool.bat/tree/main/bypass11> and download: [Quick_11_iso_esd_wim TPM_toggle.bat](#)
2. Drag the D:\OS_11.iso file to [Quick_11_iso_esd_wim TPM_toggle.bat](#), and "add" or "delete" the TPM installation check function in reverse order.

Chapter 2 Deploy

A. Precautions before deployment

1. When choosing the location to install Windows 11

First select "Disk Partition", then select "Format Partition", and then click "Next". If the disk is not formatted, an overwrite installation will cause known problems:

- Using the Administrator user:
 - The application icon will display a UAC security warning;
 - Right-clicking and running PS1 as administrator does not work;

2. When running the installer

- You must not run Setup.exe from the ISO on a system you are currently using to enter the installer, otherwise it will cause an error during the copying of the \$OEM\$ directory. This problem is a bug in the installer.
- When installing the system onto a physical device, you can only access the installation program using a [USB flash drive, CD-ROM, PE](#), or [network installation \(PXE boot\)](#), and a "clean install" is required.

B. Deploying the operating system to the physical device

Before the physical device can boot into the system, you must select one of the following options in "Preparing prerequisites for booting the installation program": "[Create a bootable physical storage medium, CD-ROM, or install over a network \(PXE boot\)](#)" and complete the process.

1. Prerequisites for preparing the installation program

When deploying system installation files to physical storage devices, you should prepare a removable drive or CD-ROM to store the Windows operating system installation files.

1.1. Create a bootable installation physical storage medium

If you plan to store more than 16GB of storage in a portable hard drive or USB drive, when purchasing the portable drive, you should choose one with dual interfaces (Type-C and USB 3.1). The advantages of choosing a drive with both Type-C and USB 3.1 interfaces are:

- If drivers are missing during system installation: You can download them via your mobile phone, then plug in a Type-C removable drive for file management and copy the downloaded drivers to the removable drive.
- In daily use, you can use the Type-C connection to your phone to store temporary files and back up data.

1.1.1. Disk Partitioning

- For installing Windows on macOS (excluding M series) or PC, storing the Windows installation files in FAT32 format is the best solution.
- If the storage device is less than 16GB, it is recommended that you create a single partition.
- For storage devices larger than 32GB, it is recommended that you partition them into 3 partitions. Partitioning scheme:

Partition 1, all remaining disk space, can be used for storing temporary files and backup data.

Partition 2, allocate 16GB of disk space to store Windows system installation files.

Partition 3: Allocate 6GB of disk space for storing the PE system. Recommended.

- Sergei Strelec | <https://sergeistrelec.name/winpe-10-8-sergei-strelec-english>
- Hiren's BootCD | <https://www.hirensbootcd.org>

1.1.2. Copy the system installation files to the disk partition.

To format the partition, select **Fat32**, then copy all files from the ISO to the root directory of the USB drive to complete the creation process.

1.2. CD-ROM

1.2.1. Prepare a **CD/DVD burner**.

1.2.2. Prepare a **blank CD**.

1.2.3. After selecting "**ISO file**", right-click and select the "**burn**" function, then click Start burning and wait for it to complete.

1.3. Install via network (PXE boot)

Each software has a different usage method; please learn it before use. You can choose from the following:

1.3.1. Serva | <https://www.vercot.com/~serva>

1.3.2. TinyPXE Server | http://labalec.fr/erwan/?page_id=958

1.3.3. iventory | <https://www.iventoy.com>

2. Physical device system installation guide

- When powering on, press different keys depending on the motherboard to enter the "Boot Menu" and then select disk boot from the BIOS menu. Common BIOS boot hotkeys include: **F2, F8, F9, F11, F12, and ESC**.
- Choose the appropriate menu based on the boot medium: **CD-ROM, PXE**, or select the partition that has been recognized by the USB drive.

C. Deploy to a system that is currently in use, and add the native boot VHD to the existing boot menu

1. Create VHD/VHDX files

1.1. Interactive Disk Management

Open "**Disk Management (diskmgmt.msc)**", select "**Actions**", select "**Create VHD**", and the "**Create or Attach Virtual Disk**" dialog box will pop up:

- Set "Location: **D:\OS.vhdx**"
- Set "Virtual disk size: **120**, selection: **GB**"
- Select "Virtual Disk Format: **VHDX**"
- Select "**Dynamically Expand**"

After clicking "**OK**", a new disk will be added to the disk area, in the following order:

- Select "Disk 2" (please ensure you select the correct disk before selecting), then right-click and select "**Initialize Disk**".
 - After selecting "Disk 2 Partition", right-click and select "**New Simple Volume Wizard**" to complete.

1.2. Command Line Creation

Quickly create (save to: **D:\OS.vhdx**, virtual disk size: **120GB, dynamically expandable**, drive letter assigned: **Q**), command line:

- Type **Diskpart** and press Enter. In this dialog box, run the following commands in sequence:

```
Create Vdisk File="D:\OS.vhdx" Maximum=122880 Type=expandable
```

```
Select Vdisk file="D:\OS.vhdx"
```

```
Attach Vdisk
```

```
Create Partition Primary
```

```
Format Fs=NTFS Label="VOS" Quick
```

```
Assign Letter=Q
```

```
Exit
```

2. Apply the system from Install.wim to the VHD/VHDX file.

After completing the "Create VHD/VHDX file" step, you can apply the index number specified in [Install.wim](#) to the specified drive letter. The settings are: Image file: [D:\OS_11\Sources\Install.wim](#), Index number: [1](#), Apply to drive letter: [Q](#), Command line:

```
Expand-WindowsImage -ImagePath "D:\OS_11\Sources\install.wim" -ApplyPath "Q:\\" -Index 1
```

3. Add native boot VHD to the existing Windows 10/11 boot menu

3.1. Backup BCD

Use the BCDEDIT tool with the /export option to back up your BCD storage. At the command prompt, run: [bcdedit /export c:\bcdbackup](#)

3.2. Copy an existing Windows 10/11 installation boot entry. Then modify the copy to use it as the VHD boot entry. At the command prompt, run:

```
bcdedit /copy {default} /d "VHD New Windows 11"
```

When the BCDEDIT command completes successfully, it returns {GUID} as output in the command prompt window.

3.3. Locate [{GUID}](#) in the command prompt output of the previous command. Copy the [GUID](#) (including the curly braces) for use in subsequent steps.

3.4. Configure the device and operating system device options for the VHD boot entry; you must replace [{GUID}](#). At the command prompt, run:

```
bcdedit /set {default} device vhd="[D:]\OS.vhdx"
```

```
bcdedit /set {default} osdevice vhd="[D:]\OS.vhdx"
```

3.5. Optional:

3.5.1. Set VHD as the default boot option. After the computer restarts, the boot menu will display all Windows installations on the computer, and VHD will start after the operating system selection countdown ends. At the command prompt, type:

```
bcdedit /default {guid}
```

3.5.2. Some x86-based systems require kernel boot configuration options to detect certain hardware information and successfully boot locally from the VHD. At the command prompt, type:

```
bcdedit /set {guid} detecthal on
```

For more information on how to use the BCDEDIT tool, please see this [Microsoft website](#).

D. Deploy to virtual machine

Common examples include Windows' built-in Hyper-V, VMware Workstation Pro, and VirtualBox.

1. Enable Hyper-V

- Ensure your system meets the requirements: Windows 10/11 Professional or Enterprise edition, equipped with a 64-bit processor with Second-Level Address Translation (SLAT), and at least 4 GB of memory. Hyper-V is not available for Windows Home edition.
- Once Hyper-V is enabled, you can use Hyper-V Manager or PowerShell commands to begin creating virtual machines.
- Hyper-V is a virtualization platform built into Windows that allows you to create and manage virtual machines. Here's how to enable Hyper-V on your system.

1.1. Using PowerShell

Open Windows PowerShell as administrator: Press **Win + S**, type "PowerShell", right-click, and select "Run as administrator". Run the following command to enable Hyper-V:

```
Enable-WindowsOptionalFeature -Online -FeatureName Microsoft-Hyper-V -All
```

When prompted by the system, type **Y** to restart your computer to complete the installation. When prompted by the system again, restart your computer.

1.2. Select "Turn Windows features on or off"

1.2.1. Open the "Turn Windows features on or off" dialog box

1.2.1.1. After running **OptionalFeatures**, a "Turn Windows features on or off" message pops up.

1.2.1.2. Use Control Panel

○ Open Control Panel: Press **Win + S**, type "Control Panel", and then open it.

○ Navigate to Programs > Programs and Features > Turn Windows features on or off.

1.2.2. After opening, check the **Hyper-V** checkbox and then click OK.

1.2.3. Restart your computer to complete the installation.

2. VMware Workstation Pro

Official website | <https://www.vmware.com/products/desktop-hypervisor/workstation-and-fusion>

3. VirtualBox

Official website | <https://www.virtualbox.org>

E. Advanced deployment

1. Fully automatic installation

- To achieve fully automated installation during batch deployment, it is necessary to modify the pre-configuration.
- Multiple hard drives

Batch installation prioritizes determining the number of hard drives and initializing them, then implements different solutions based on the different hard drive requirements.

2. Deployment Engine

If you've added a deployment engine ([Multilingual](#), [YiSuite](#)), you can customize the deployment process. Download the template: [Yi.Engine.Deploy.Rule.iso](#). After downloading, extract it to any disk, or mount the ISO or modify its contents during the initial deployment. Learn more:

- Multilingual | <https://github.com/ilikeyi/Multilingual>
- YiSuite | <https://github.com/ilikeyi/YiSuite>

2.1. User solutions should be provided in advance.

The default setting uses the self-created user Administrator and logs in automatically. You can switch between self-created and custom users by modifying the following configuration.

2.1.1. Self-created user Administrator

The default user is Administrator, who will log in automatically. This user name is inserted between `<OOBE>` and `</OOBE>`.

```
<UserAccounts>
  <LocalAccounts>
    <LocalAccount wcm:action="add">
      <Password>
        <Value></Value>
      <PlainText>true</PlainText>
    </Password>
    <Description>Administrator</Description>
    <DisplayName>Administrator</DisplayName>
    <Group>Administrators</Group>
    <Name>Administrator</Name>
  </LocalAccount>
</LocalAccounts>
</UserAccounts>
<AutoLogon>
  <Password>
    <Value></Value>
  <PlainText>true</PlainText>
  </Password>
  <Enabled>true</Enabled>
  <Username>Administrator</Username>
</AutoLogon>
```

</AutoLogon>

2.1.2. OOBE interactive creation of new users

After setting up a custom user and completing the system installation, you can select local or online user settings in OOBE.

2.1.2.1. Delete

Username: Delete from the beginning of <UserAccounts> to </UserAccounts>

Automatic Login: Delete from the beginning of <AutoLogon> to </AutoLogon>

2.1.2.2. Replace

From the beginning <OOBE> to </OOBE>

<OOBE>

<ProtectYourPC>3</ProtectYourPC>

<HideEULAPage>true</HideEULAPage>

<HideWirelessSetupInOOBE>true</HideWirelessSetupInOOBE>

</OOBE>

Chapter 3 Common problem

I. Clean all mounts to

Close any applications that may be accessing files in the image, including File Explorer.

Dismount-WindowsImage -Path "D:\OS_11_Custom\Install\Install\Mount" -Discard

Dismount-WindowsImage -Path "D:\OS_11_Custom\Install\WinRE\Mount" -Discard

Dismount-WindowsImage -Path "D:\OS_11_Custom\Boot\Boot\Mount" -Discard

II. Fix the problem of abnormal mounting

1. View mounted

Get-WindowsImage -Mounted

2. Delete the DISM mount record saved in the registry

Remove-Item -Path "HKLM:\SOFTWARE\Microsoft\WIMMount\Mounted Images*" -Force -Recurse -ErrorAction SilentlyContinue

3. Delete all resources associated with the corrupted mounted image

Clear-WindowsCorruptMountPoint

Dism /cleanup-wim

III. Clean up

A large number of temporary files will be generated during the packaging process. Installation files will be temporarily released when installing InBox Apps applications, installing cumulative updates, and installing language packs. Therefore, unscheduled cleaning of outdated ones will occupy a large amount of disk space for a long time. It is recommended that you try the following methods to achieve this. Cleanup plan to free up more space:

1. Common logs

1.1. Clean using the command line

```
$TempPaths = @( $env:Temp; "$($env:SystemRoot)\Logs\DISM"; )

foreach ($TempPath in $TempPaths) {

    if (Test-Path -Path $TempPath) {

        write-host " $($TempPath)" -ForegroundColor Green

        Get-ChildItem -Path $TempPath -Recurse -Force | ForEach-Object {

            try {

                Remove-Item $_.FullName -Force -Recurse -ErrorAction SilentlyContinue | Out-Null

            } catch {

                write-host $_ -ForegroundColor Red

            }

        }

    }

}
```

1.2. Manual deletion

1.2.1. DISM log

Using the "Disk Cleanup" function, the logs generated by DISM cannot be cleaned and need to be deleted manually. Path: {system disk}:\Windows\Logs\DISM

1.2.2. Temporary directory

Using the "Disk Cleanup" function, files in the temporary directory cannot be cleaned and manual operation is required.

Run: %Temp% to quickly locate and open the temporary directory. Path: {system disk}:\Users\{username}\AppData\Local\Temp

1.2.3. Clear the command line records of "Terminal"

```
Remove-Item -Path (Get-PSReadlineOption).HistorySavePath -ErrorAction SilentlyContinue
```

After cleaning up command line records, you need to restart the "Terminal" to take effect.

2. Disk cleanup

Run cleanmgr, selecting the disks and types to clean.

1. Adding a "cumulative update" using the initial build of Windows 11 25H2 (26200.6584) causes a "health" issue when using a "fixed update".

Test file: en-us_windows_11_business_editions_version_25h2_x64_dvd_41c521e7.iso. After adding cumulative update (KB5070311 "26200.7296") during the packaging process, the component health check is normal, and there are no problems before the update is solidified.

After using the hard update command "`Dism /Image:"D:\OS_11" /cleanup-image /StartComponentCleanup /ResetBase`", the health status is checked as "damaged". Known solutions:

- Using the initial build of [Windows 11 24H2 \(26100.1742\)](#) can resolve health issues after a fixed update.

2. Windows Security Center

When testing a clean install of the initial Chinese version of [Windows 11 25H2 26200.6584](#), the image file ([zh-cn_windows_11_consumer_editions_version_25h2_x64_dvd_0549fc93.iso](#)) displayed an English version of Windows Security Center after installation, indicating the language pack was not localized. This issue has been present since the May/June images of Windows 11 24H2; updating Windows Update resolves the problem.
