

MICROSOFT WINDOWS 10 22H2

Different system versions have different packaging methods. The packaging process includes: "Language pack: add, associate, delete", "Drive: add, delete", "Cumulative update: add, delete", "InBox Apps: add, Update, mark" etc.

There are many hidden stories hidden behind this. If you want to unlock these, are you ready to start trying to encapsulate them?

Chapter 1 Encapsulation

A. Prerequisites

II Running operating system

When the operating system you are running is Windows 10 or lower than Windows 11 24H2, in some cases, using the DISM command to create a higher version image will cause some unknown problems. For example, when running the DISM command in the Windows 10 operating system to process the Windows Server 2025 offline image, you may receive an error message during the packaging process: "This application cannot run on your computer." Solution:

- 1. Upgrade the running operating system or reinstall to a higher version (recommended);
- 2. Upgrade or install a new version of ADK or PowerShell (not recommended)
 - 2.1. You can try to upgrade to the latest PowerShell 7 or higher version;
 - 2.2. After installing the latest version of ADK and replacing the DISM command, the problem of low DISM version can be solved. However, the command line mainly used by the packaging script is the PowerShell command line, so it is not recommended that you use the above method. The best method is to upgrade the running operating system or reinstall to a higher version.

II ISO tools

Use a software that can edit ISO files, such as: PowerISO, DAEMON Tools, ISO Workshop;

III Requirements

1. System installation package

Keywords: iteration, cross-version, major version, cumulative update, initial release

1.1. illustrate

- 1.1.1. Please remake the image when each version is updated, for example, when crossing from 21H1 to 22H2, avoid other compatibility problems, and do not make the image based on the old image;
- 1.1.2. The regulation has been clearly communicated to packagers in various forms by some OEMs, and direct upgrades from iterative versions are not allowed;
- 1.1.3. Please use "Initial Version" and "Developer Edition" for production. There was a brief appearance in the official Microsoft documentation that the initial version must be used in production, but this sentence was later deleted in the official documentation;
- 1.1.4. After installing the language pack, you must re-add the cumulative update (the same version number), and if you do not add the cumulative update, problems such as "garbled characters" and "interface flashback" will occur.
- 1.1.5. Evolutionary process: Windows 10 22H2, Build 19045.2006 + KB5027215 = OS Build 19045.3086
- 1.2. Prepare to download the initial or developer version
 - 1.2.1. x64
 - **1.2.1.1.** en-us_windows_10_business_editions_version_22h2_x64_dvd_8cf17b79.iso
 - $\textbf{1.2.1.2.} \qquad \quad \text{en-us_windows_10_consumer_editions_version_22h2_x64_dvd_8da72ab3.iso}$
 - $\textbf{1.2.1.3.} \qquad \quad \text{en-us_windows_10_iot_enterprise_version_22h2_x64_dvd_51cc370f.iso}$

- 1.2.2. x86
 - 1.2.2.1. en-us_windows_10_business_editions_version_22h2_x86_dvd_186a68c3.iso
 - 1.2.2.2. en-us_windows_10_consumer_editions_version_22h2_x86_dvd_90883feb.iso
- 1.2.3. arm64
 - **1.2.3.1.** en-us_windows_10_iot_enterprise_version_22h2_arm64_dvd_39566b6b.iso
- 1.3. After the sample download en-us_windows_10_business_editions_version_22h2_x64_dvd_8cf17b79.iso,Unzip to: D:\en-us_windows_10_business_editions_version_22h2_x64_dvd_8cf17b79

Note: Before decompressing to disk D, you should check whether it is a ReFS partition. If it is a ReFS partition, some commands will fail. Solution: Please use a disk partition in NTFS format.

- 1.4. After decompression is complete, change the directory en-us_windows_10_business_editions_version_22h2_x64_dvd_8cf17b79 change to D:\OS_10
- 1.5. All scripts and all paths are set to D:\OS_10 as the image source.
- 1.6. Installation configuration
 - 1.6.1. Learn: Windows Setup Edition Configuration and Product ID Files (El.cfg and PID.txt)
 - 1.6.2. Known issues
 - 1.6.2.1. When there is no Ei.cfg, ISO boot installation will report an error when selecting certain versions, prompting: Windows cannot find the Microsoft Software License terms. Make sure the installation sources are valid and restart the installation.
 - 1.6.2.2. How to solve it? Add ei.cfg to D:\OS_10\Sources and create ei.cfg:

@"

[Channel]

volume

[VL]

1

"@ | Out-File -FilePath "D:\OS_10\sources\EI.CFG" -Encoding Ascii

- 2. Language pack
 - 2.1. Learn

As you read, please understand the important highlights of "Blue".

- 2.1.1. Languages overview
- 2.1.2. Add languages to a Windows 10 image
- 2.1.3. Language and region Features on Demand (FOD)
 - 2.1.3.1. Fonts

- When adding a language pack, when the corresponding region is triggered, the required font functions need to be added, download "List of all available language FODs" learn more.
- In "Language Pack: Extract", the automatic recognition function has been added, and you can understand the functions: Function Match_Required_Fonts

2.1.3.2. Regional association

What are regional connections?

• When the image language is only in English, after adding the zh-HK language pack, the image language will not be added. You should install zh-TW first, and then install zh-HK to obtain the corresponding association.

Known regional associations:

- 2.1.3.2.1. Region: ar-sa, Optional associated areas: en-US, associated installation package:

2.1.3.3. Other region-specific requirements

When triggering a known area, a specific "package" needs to be added.

2.1.3.3.1. Region: zh-TW

Package: Microsoft-Windows-InternationalFeatures-Taiwan-

Package~31bf3856ad364e35~amd64~~.cab

Description: Supplemental support for Taiwan date formatting requirements. Package will be provided to customers located in Taiwan.

Recommendation: Preinstall only on devices shipping to the Taiwan market. Not installing this capability on devices causes any API calls to that use the Taiwan calendar to fail.

THERE IS CONTROVERSY:

During the test, it was found that this package was not installed in the original image of Microsoft's
official original Windows 10 However, there are known issues in the recommended items. In the end,
it is consistent with the official Microsoft original version, and the packager can freely choose to install
it. or not.

IV Windows Security

- When processing the encapsulation task, a large number of temporary files will be generated, and a large number of installation files will be released when installing the application in InBox Apps;
- Turning on Windows Security scans files and takes up a lot of CPU.
- In test: 1 hour and 22 minutes before shutdown, 20 minutes after shutdown.

How to close:

With the command line in green, hold down the Windows key and press R to launch Run.

- 1. Open Windows Security or run: windowsdefender:
- 2. Select "Virus & Threat Protection" or Run: windowsdefender://threat
- 3. Find "Virus & Threat Protection Settings", click "Manage Settings" or Run: windowsdefender://threatsettings, we recommend that you turn off some features:

- 3.1. Real-time protection
- 3.2. Cloud=delivered protection
- 3.3. Automatic sample submission
- 3.4. Tamper Protection
- 4. When you're not encapsulated, we recommend that you turn on Windows Security.

V Command line

- 1. Optional "Terminal" or "PowerShell ISE", if "Terminal" is not installed, please go to: https://github.com/microsoft/terminal/releases After downloading;
- 2. Open "Terminal" or "PowerShell ISE" as administrator, it is recommended to set the PowerShell execution policy: bypass, PS command line:

Set-ExecutionPolicy - ExecutionPolicy Bypass - Force

- 3. In this article, PS command line, green part, please copy it, paste it into the "Terminal" dialog box, press Enter and start running;
- 4. When there is .ps1, right-click the file and select Run with PowerShell, or copy the path and paste it into Terminal to run, the path with a colon, add the & character in the command line, example: & "D:\YiSolutions_Encapsulation_SIP.ps1"
- B. Language Pack: Extract

4.2. Offline image language: change

- Starting Windows 11, the default System UI Language set by DISM is left unaltered on all editions except for Home edition. For all commercial editions the language chosen during the Out-of-Box Experience (OOBE) is set as the System Preferred UI language and Windows will be displayed in this language and for Home edition the language chosen at OOBE will continue to be the default System UI Language.
- As of Windows 10, version 2004, if an .appx-based Language Experience Pack (LXP) backed language is passed as an argument then the language will be set as the System Preferred UI language and its parent language will be set as the Default System UI language. In prior versions only .cab based language packs were supported.

4.2.1. Change default language, regional settings, and other international settings

4.2.2. View available language settings

 $\label{lem:linear_loss} \begin{tabular}{ll} $$Dism/Image:"D:\OS_10_Custom\Install\Install\Mount"/Get-Intl. \end{tabular}$

4.3. Language packs: Removed

- After you add languages, if you want to deploy to a non-English locale, you can save space by removing the English language component. When you remove a language, uninstall the language components in the reverse order in which you added them.
- After adding the Chinese, delete "English United States" in reverse, the Region tag: en-US, you need to extract the language pack in advance

5.5. Region tag: Understanding

Before understanding zone tags, first understand the list of languages available in the ZuneMusic app: en-us, en-gb, as-in, az-latn-az, bs-latn-ba, bn-in, cs-cz, cy-gb, ar-sa, de-de, af-za, am-et, da-dk, el-gr, es-es, es-mx, ca-es, ca-es-valencia, eu-es, fi-fi, bg-bg, ga-ie, et-ee, gl-es, gu-in, gd-gb, fil-ph, fr-ca, fr-fr, hy-am, fa-ir, hu-hu, id-id, it-it, ja-jp, hr-hr, ka-ge, is-is, he-il, hi-in, kk-kz, lo-la, km-kh, lt-lt, kn-in, kok-in, ko-kr, mk-mk, lv-lv, ms-my, mi-nz, mr-in, mt-mt, ne-np, nl-nl, nb-no, ml-in, nn-no, lb-lu, or-in, ro-ro, sk-sk, ru-ru, pl-pl, quz-pe, pt-br, pt-pt, sq-al, ta-in, th-th, sv-se, pa-in, sr-cyrl-ba, sr-cyrl-rs, sr-latn-rs, ur-pk, ug-cn, tr-tr, uk-ua, tt-ru, zh-cn, vi-vn, uz-latn-uz, sl-si, zh-tw, te-in

View installed languages for offline images

 $\label{lem:linear_loss} \begin{tabular}{ll} $$Dism/Image:"D:\OS_10_Custom\Install\Install\Mount"/Get-Intlock) & $$I(S)$ & $I(S)$

View results for installed languages: en-US, zh-CN, When installing the ZuneMusic app, the installer will match "Installed Languages" and automatically filter the list of uninstalled languages, This is the area tag.

5.6. Region tag: Add

Microsoft officially provides the Local Language Experience Package (LXPS) installation file for Windows 10. It will no longer be provided for Windows 11. Want to get:

5.6.1. Download using the Windows Local Language Experience Packs (LXPs) Downloader

learn: https://github.com/ilikeyi/LXPs

After downloading, save to: D:\OS_10_Custom\Install\Install\Install\InBox.Appx

D:\OS_10_Custom\Install\Install\InBox.Appx directory and rename it:
LanguageExperiencePack.zh-cn.Neutral.Appx

5.6.3. Execute the installation command to install the local language experience package (LXPs)

After understanding how to add zone tags, obtain LanguageExperiencePack.zh-cn.Neutral, execute the installation command:

Add-AppxProvisionedPackage -Path "D:\OS_10_Custom\Install\Install\Mount" -PackagePath "D:\OS_10_Custom\Install\InBox.appx\LanguageExperiencePack.zh-cn.Neutral.appx" -SkipLicense

5.6.4. Regional tag: New changes

The installed language of the offline image will become the default. For example, if the installed languages are en-US and zh-CN, when you reinstall or update the InBox Apps application, the installed language will be referenced for matching and the corresponding language pack will be automatically added. You can view the changes in the following ways.

5.6.4.1. InBox Apps: An installed application package

5.9. InBox Apps: optimization

After the app is installed, provisioning the Appx package should be optimized to reduce the app's disk usage by replacing identical files with hard links, only for offline images.

6. Cumulative updates

- When upgrading different versions or old versions to the latest version, you need to add the "Function Enablement Package" first before adding the latest cumulative update;
- After adding a language pack, you can install the same cumulative update as the initial version to resolve a known issue where the "Components: All packages installed in the image" status is not refreshed after installation;
- To stay up to date, it is recommended that you download the latest version.

6.1. Feature enablement package

- Learn: KB5015684: Featured update to Windows 10, version 22H2 by using an enablement package
- Note: When using the same version as Windows 10 22H2 19045.2006 and above, the feature enablement package can be skipped.
- When making Windows 10 versions 2004, 20H2, 21H1, and 21H2, you need to install the "Feature Enablement Package" in advance before you can install the cumulative update of 19045.*. After downloading, save it to:

- Learn about "Automatically Adding Languages Installed in Windows Systems", learn: https://github.com/ilikeyi/Multilingual, how to download:
 - After entering the website, click "Code", "Download Compressed Package", and after the download is completed, you will get the main.zip compressed package file.
 - Go to the https://github.com/ilikeyi/Multilingual/releases download page, select the available version: 1.1.1.1, select the download source code format: zip, and get the Multilingual-1.1.1.1.zip compressed package file after the download is completed;
- Unzip the downloaded main.zip or Multilingual-1.1.1.1.zip to: D:\Multilingual-1.1.1.1, and rename: D:\Multilingual

2. Deployment Engine: Advanced

2.1. Deployment engine: adding process

After copying the deployment engine, you can add deployment tags to intervene in the installation process.

2.2. Unattended solution

When the customization is unattended, please modify it simultaneously if the following files exist:

- D:\OS_10\Autounattend.xml
- D:\OS_10\Sources\Unattend.xml
- D:\OS_10\sources\\$OEM\$\\$\$\Panther\unattend.xml
- D:\OS_10_Custom\Install\Install\Mount\Panther\Unattend.xml

2.2.1. Multilingual or monolingual

In multi-language and monolingual, you can switch between each other. When replacing, please replace all the same ones in the file.

2.2.1.1. Multi-language

```
<UILanguage>%OSDUILanguage%</UILanguage>
```

<InputLocale>%OSDInputLocale%</inputLocale>

<SystemLocale>%OSDSystemLocale%</SystemLocale>

<UILanguage>%OSDUILanguage%</UILanguage>

<UILanguageFallback>%OSDUILanguageFallback%</UILanguageFallback>

<userLocale>%OSDUserLocale%</userLocale>

2.2.1.2. Monolingual

A single language needs to specify a Region tag, for example, specify a Region tag: ${\sf zh\text{-}CN}$

<UILanguage>zh-CN</UILanguage>

<InputLocale>zh-CN</InputLocale>

<SystemLocale>zh-CN</SystemLocale>

<UILanguage>zh-CN</UILanguage>

 $<\!UIL anguage Fallback \!>\! zh-CN \!<\! /UIL anguage Fallback \!>\!$

<use><UserLocale>zh-CN</UserLocale></userLocale>

2.2.2. User plan

By default, the self-created user Administrator is used and logged in automatically. It can be switched by modifying the following configuration: self-created or customized user.

2.2.2.1. Self-created user Administrator

By default, the self-created user: Administrator is used and logged in automatically, inserted between <OOBE>

and </OOBE>. <UserAccounts> <LocalAccounts> <LocalAccount wcm:action="add"> <Password> <Value></Value> <PlainText>true</PlainText> </Password> <Description>Administrator</Description> <DisplayName>Administrator</DisplayName> <Group>Administrators</Group> <Name>Administrator</Name> </LocalAccount> </LocalAccounts> </UserAccounts> <AutoLogon> <Password> <Value></Value> <PlainText>true</PlainText> </Password> <Enabled>true</Enabled>

Custom user 2.2.2.2.

</AutoLogon>

After setting up a custom user and installing the system, in OOBE, you can choose settings such as local and

Delete 2.2.2.2.1.

<Username>Administrator</Username>

Username: Removed from start <UserAccounts> to </UserAccounts>

Autologin: Remove from start <AutoLogon> to </AutoLogon>

2.2.2.2.2. Replace

From the beginning <OOBE> to </OOBE>

```
<OOBE>

<ProtectYourPC>3</ProtectYourPC>

<HideEULAPage>true</HideEULAPage>

<HideWirelessSetupInOOBE>true</HideWirelessSetupInOOBE>

</OOBE>
```
