Different system versions have different packaging methods. The packaging process includes: "Language pack: add, associate, delete", "Drive: add, delete", "Cumulative update: add, delete", "InBox Apps: add, Update, mark" etc.

There are many hidden stories hidden behind this. If you want to unlock these, are you ready to start trying to encapsulate them?

Chapter 1   Encapsulation

A.   Prerequisites

II   Running operating system

When the operating system you are running is Windows 10 or lower than Windows 11 24H2, in some cases, using the DISM command to create a higher version image will cause some unknown problems. For example, when running the DISM command in the Windows 10 operating system to process the Windows Server 2025 offline image, you may receive an error message during the packaging process: "This application cannot run on your computer." Solution:

1.   Upgrade the running operating system or reinstall to a higher version (recommended);

2.   Upgrade or install a new version of ADK or PowerShell (not recommended)

2.1.   You can try to upgrade to the latest PowerShell 7 or higher version;

2.2.   After installing the latest version of ADK and replacing the DISM command, the problem of low DISM version can be solved. However, the command line mainly used by the packaging script is the PowerShell command line, so it is not recommended that you use the above method. The best method is to upgrade the running operating system or reinstall to a higher version.

II   ISO tools

Use a software that can edit ISO files, such as: PowerISO, DAEMON Tools, ISO Workshop;

III   Requirements

1.   System installation package

Keywords: iteration, cross-version, major version, cumulative update, initial release

1.1.   illustrate

1.1.1.   Please remake the image when each version is updated, for example, when crossing from 21H1 to 22H2, avoid other compatibility problems, and do not make the image based on the old image;

1.1.2.   The regulation has been clearly communicated to packagers in various forms by some OEMs, and direct upgrades from iterative versions are not allowed;

1.1.3.   Please use "Initial Version" and "Developer Edition" for production. There was a brief appearance in the official Microsoft documentation that the initial version must be used in production, but this sentence was later deleted in the official documentation;

1.1.4.   After installing the language pack, you must re-add the cumulative update (the same version number), and if you do not add the cumulative update, problems such as "garbled characters" and "interface flashback" will occur.

1.1.5.   Evolutionary process: Windows 10 22H2, Build 19045.2006 + KB5027215 = OS Build 19045.3086

1.2.   Prepare to download the initial or developer version

1.2.1.   x64

1.2.1.1.   en-us_windows_10_business_editions_version_22h2_x64_dvd_8cf17b79.iso

1.2.1.2.   en-us_windows_10_consumer_editions_version_22h2_x64_dvd_8da72ab3.iso

1.3.   After the sample download en-us_windows_10_business_editions_version_22h2_x64_dvd_8cf17b79.iso, Unzip to: D:\en-

us_windows_10_business_editions_version_22h2_x64_dvd_8cf17b79

Note: Before decompressing to disk D, you should check whether it is a ReFS partition. If it is a ReFS partition, some commands will fail. Solution: Please use a disk partition in NTFS format.

1.4.   After decompression is complete, change the directory en-us_windows_10_business_editions_version_22h2_x64_dvd_8cf17b79 change to D:\OS_10

1.5.   All scripts and all paths are set to D:\OS_10 as the image source.

1.6.   Installation configuration

    1.6.1.   Learn: Windows Setup Edition Configuration and Product ID Files (EI.cfg and PID.txt)

    1.6.2.   Known issues

        1.6.2.1.   When there is no Ei.cfg, ISO boot installation will report an error when selecting certain versions, prompting: Windows cannot find the Microsoft Software License terms. Make sure the insttallation sources are valid and restart the installation.

        1.6.2.2.   How to solve it? Add ei.cfg to D:\OS_10\Sources and create ei.cfg:

@"

[Channel]

volume

[VL]

1

"@ | Out-File -FilePath "D:\OS_10\sources\EI.CFG" -Encoding Ascii

2.   Language pack

    2.1.   Learn

    As you read, please understand the important highlights of "Blue".

    2.1.1.   Languages overview

    2.1.2.   Add languages to a Windows 10 image

    2.1.3.   Language and region Features on Demand (FOD)

        2.1.3.1.   Fonts

- When adding a language pack, when the corresponding region is triggered, the required font functions need to be added, download "List of all available language FODs" learn more.

- In "Language Pack: Extract", the automatic recognition function has been added, and you can understand the functions: Function Match_Required_Fonts

        2.1.3.2.   Regional association

    What are regional connections?

- When the image language is only in English, after adding the zh-HK language pack, the image language will not be added. You should install zh-TW first, and then install zh-HK to obtain the corresponding association.

Known regional associations:

2.1.3.3.　　Other region-specific requirements

When triggering a known area, a specific "package" needs to be added.

2.1.3.3.1.　　Region: zh-TW

Package: Microsoft-Windows-InternationalFeatures-Taiwan-
Package~31bf3856ad364e35~amd64~~.cab

Description: Supplemental support for Taiwan date formatting requirements. Package will
be provided to customers located in Taiwan.

Recommendation: Preinstall only on devices shipping to the Taiwan market. Not installing
this capability on devices causes any API calls to that use the Taiwan calendar to fail.

THERE IS CONTROVERSY:

- During the test, it was found that this package was not installed in the original image of Microsoft's
  official original Windows 10 However, there are known issues in the recommended items. In the end,
  it is consistent with the official Microsoft original version, and the packager can freely choose to install
  it. or not.

6.   Cumulative updates

- When upgrading different versions or old versions to the latest version, you need to add the "Function Enablement Package" first before adding the latest cumulative update;

- After adding a language pack, you can install the same cumulative update as the initial version to resolve a known issue where the "Components: All packages installed in the image" status is not refreshed after installation;

- To stay up to date, it is recommended that you download the latest version.

6.1.   Feature enablement package

- o   Learn: KB5015684: Featured update to Windows 10, version 22H2 by using an enablement package

- o   Note: When using the same version as Windows 10 22H2 19045.2006 and above, the feature enablement package can be skipped.

- o   When making Windows 10 versions 2004, 20H2, 21H1, and 21H2, you need to install the "Feature Enablement Package" in advance before you can install the cumulative update of 19045.*. After downloading, save it to: D:\OS_10_Custom\Install\Install\Update, select according to the architecture download:

6.1.1.   x64, default
